

1. Record Nr.	UNINA9910484563403321
Autore	Zavalishin Oleg Ivanovich
Titolo	Information support and aircraft flight management / / Oleg Ivanovich Zavalishin [and three others]
Pubbl/distr/stampa	Singapore : , : Springer, , [2021] ©2021
ISBN	981-16-0088-0
Descrizione fisica	1 online resource (xiii, 146 pages) : illustrations
Collana	Springer aerospace technology
Disciplina	621.3848
Soggetti	Guidance systems (Flight) Air traffic control Navigation (Aeronautics)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Intro -- Introduction -- Contents -- Abbreviations -- 1 Implementation and Ways to Implement ADS-B in Russian Federation -- 1.1 The Implementation Options for ADS -- 1.2 Technical Implementation Means ADS-B -- 1.2.1 Principles of Construction of Systems of ADS-B ICAO -- 1.2.2 Multifunctional Channels of Systems ADS-B and Methods of Management -- 1.2.3 Ground Station VDL-4 Intended for the Operation of the System ADS-B -- 1.3 Russian Information System Based on ADS-B for the Flight of Aircraft in the Arctic and Far Eastern Regions -- 1.3.1 The Objectives and Main Approaches for the Development of Communication and Cooperation in the Arctic -- 1.3.2 The Variant of Construction of the System of the Arctic ADS-B. System Relay Information -- 1.3.3 Communications System of the Control Tower-Radar in Shortwave Range -- 1.4 Russian Information System for Aircraft Traffic Control in the Kuril Archipelago Area (RISATC KA) -- 1.4.1 The Objectives and Main Approaches to the Creation of Information System of RISATC KA -- 1.4.2 Questions of Technical Implementation of RISATC KA -- 1.5 The Extension of Possibilities of Application of Technology ADS-B in Information Systems of the Transport Complex of the Russian Federation -- 1.5.1 System ADS-B to Provide a Small Aircraft Flying in Uncontrolled Airspace -- 1.5.2 ADS-B in the System of Transport

Logistics (STL) of Agricultural Production -- 1.5.3 Control a Swarm of Uncrewed Aerial Vehicles (UAVs) Using the Technology of ADS-B -- 1.6 The Program of Implementation Tools Broadcast Automatic Dependent Surveillance in the Russian Federation -- References -- 2 Building a Better Computing Block for Devices of Civil Aviation on the Criterion of Reliability -- 2.1 Development of Methods of Calculation of Reliability Computing Block, Composed of Heterogeneous Elements.

2.1.1 The General Approach to the Calculation of Reliability Computing Block -- 2.1.2 Review of Existing Civil Aviation Computing Blocks in the Example of the Aircraft "Sukhoi Superjet-100" -- 2.1.3 A Formal Approach to the Calculation of the Reliability Computing Block -- 2.1.4 The Method of Calculating the Reliability Computing Block, Taking into Account Different Types of Errors -- 2.2 Building a Better Computer System from Heterogeneous Elements According to the Proposed Criterion -- 2.2.1 Analysis of Different Approaches to the Choice of the Criterion to Build a Better System -- 2.2.2 Building the Best Computing Block from Different Types of Elements with Known Reliability Parameters -- 2.2.3 Building the Best Computing Block from Relay Elements with Possible Errors of the First and Second Kind -- 2.3 Build the Best Multifunctional Computing Block -- 2.3.1 The Construction Algorithm Selects the Best Computing Block Based on the Execution of Several Functions -- 2.3.2 Building a Better Computing Device for Modeling the Spatial Movement of the Helicopter -- References -- 3 Ensuring the Reliability and Integrity of the Information Service of Aircraft at Various Stages and Under Various Flight Conditions -- 3.1 The Implementation of the Information Service of Aircraft Based on Satellite and Optical Systems, Designed "NPPF Spectr" -- 3.1.1 Monitoring Center of Satellite Constellations for Aviation Users -- 3.1.2 Local Monitoring and Correcting Station GBAS LKKS-A-2000 -- 3.1.3 Certified Small Satellite Tracker -- 3.1.4 Aviation Satellite Optical Engine Precise Positioning the PILOT -- 3.1.5 Land and Flight Checks -- 3.1.6 Some Features of the Use of Satellite Navigation in Civil Aviation -- 3.2 Build an Algorithm to Identify Errors in Voice Radio Communication Radio Traffic.

3.2.1 The Algorithm for Identifying Errors in the Radio Channel Based on the Use of the System of Reference Assessments -- 3.2.2 The Definition of Error When Detected Errors in a Radio Channel with Voice Exchange -- References -- Appendix A Software Implementation of the Method of Calculating the Reliability of Computing Block, Taking into Account Different Types of Errors -- Appendix B The Program for the Selection of the Best Computing Systems from Heterogeneous Elements with a Known Probability of Failure -- Appendix C The Program for Choosing the Best Computer System of the Relay Elements, with the Error Probability of the First and Second Kind -- Appendix D The Certificate of State Registration of Computer Programs No. 2019665466. The Program of Choosing the Best System from Heterogeneous Elements on the Criterion of Reliability (PCS CR) -- Appendix E The Program Selects the Best Computing Block Based on the Execution of Several Functions -- Appendix F The Program is Building a Better Computing Device for Modeling the Spatial Movement of the Helicopter -- Appendix G Specifications LKKS-A-2000 -- Appendix H Program Algorithm Identification of Errors with Voice Radio Communication Exchange -- Appendix I The Program Algorithm for Definition of Errors First and Second Are Kind of the Detection Error in the Voice Mail.
