Sommario/riassunto	This book contains the key findings related to cybersecurity research analysis for Europe and Japan collected during the EUNITY project. A wide-scope analysis of the synergies and differences between the two regions, the current trends and challenges is provided. The survey is multifaceted, including the relevant legislation, policies and cybersecurity agendas, roadmaps and timelines at the EU and National levels in Europe and in Japan, including the industry and standardization point of view, identifying and prioritizing the joint areas of interests. Readers from both industry and academia in the EU or Japan interested in entering international cybersecurity cooperation with each other or adding an R&D aspect to an existing one will find it useful in understanding the legal and organizational context and identifying most promising areas of research. Readers from outside EU and Japan may compare the findings with their own cyber-R&D landscape or gain context when entering those markets.
