

1. Record Nr.	UNINA9910484740003321
Titolo	Handbook of Climate Change Mitigation [[electronic resource] /] / edited by Wei-Yin Chen, John Seiner, Toshio Suzuki, Maximilian Lackner
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 2012
ISBN	1-4419-7991-3
Edizione	[1st ed. 2012.]
Descrizione fisica	1 online resource (eReference.)
Collana	Springer reference
Disciplina	621.042
Soggetti	Renewable energy resources Climate change Chemical engineering Environmental chemistry Analytical chemistry Catalysis Renewable and Green Energy Climate Change Management and Policy Industrial Chemistry/Chemical Engineering Environmental Chemistry Analytical Chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction -- Part I. Scientific Evidences of Climate Change and Societal Issues. Climate Change – Evidences and Contrarian Viewpoints -- Carbon Emissions and Human Activities -- 4. Natural Climatic Archives: Overview and Discussion of Proxy Data -- 5. Chemistry and Physics of CO2 -- Climate Change and U.S. Laws -- Climate Change and International Protocols -- Ethics and Environmental Policy -- Mass Media Roles in Climate Change Mitigation -- Energy Economics -- Emission Trading -- Venture Capital Investment and Trend in Clean Technologies -- Part II. Impact of Climate Change -- Carbon Liability -- Impacts of Climatic Changes on Biogeochemical Cycling in Terrestrial Ecosystems -- Climate Change and Dynamics of Soil Carbon Cycle -- Effects of Climate Change on Costal Flood -- Impact of

Climate Change on Biodiversity -- Impacts of Climatic Changes on Water Quality and Fish Habitat in Aquatic Systems -- Part III. Energy Conservation -- Energy Efficient Design on Future Transportation Systems -- Building Design for Energy Conservation -- Thermal Energy Storage and Transport -- Greenhouse Gas Reduction from Chemical Processing -- Mobile and Aerial Sources of Greenhouse Gases and Abatement Strategies -- Part IV. Alternative Energies -- Biochemical Conversion of Biomass -- Thermal Conversion of Biomass -- Hydrogen Production -- Nuclear Energy and Environmental Impact -- Harvesting Solar Energy using Inexpensive and Benign Materials -- Solar Concentrators -- Wind Energy -- Geothermal Energy -- Hydropower -- Part V. Advanced Combustion -- Carbon Capture and Sequestration -- Chemical Absorption -- Oxy-Fuel Combustion -- Integrated Gasification Combined Cycle (IGCC) -- Conversion of Syngas to Fuels -- Chemical Looping -- Integrated O<sub>2</sub>-Transport Membrane -- Part VI. Advanced Technologies -- Low Temperature Fuel Cells -- Solid Oxide Fuel Cells -- Molten Carbonate Fuel Cells -- Photocatalytic Reduction of CO<sub>2</sub> and Water Splitting -- Geoengineering Strategy for Global Climate Stabilization -- Technological Options for Reducing Non-CO<sub>2</sub> GHG Emissions -- Thermoacoustics -- Part VII. Education and Outreach -- Developing a Climate Literate Society Through Education -- An Introductory Course on Climate Change.

---

#### Sommario/riassunto

There is a mounting consensus that human behavior is changing the global climate and its consequence could be catastrophic. Reducing the 24 billion metric tons of carbon dioxide emissions from stationary and mobile sources is a gigantic task involving both technological challenges and monumental financial and societal costs. The pursuit of sustainable energy resources, environment, and economy has become a complex issue of global scale that affects the daily life of every citizen of the world. The present mitigation activities range from energy conservation, carbon-neutral energy conversions, carbon advanced combustion process that produce no greenhouse gases and that enable carbon capture and sequestration, to other advanced technologies. From its causes and impacts to its solutions, the issues surrounding climate change involve multidisciplinary science and technology. This handbook will provide a single source of this information. The book will be divided into the following sections: Scientific Evidence of Climate Change and Societal Issues, Impacts of Climate Change, Energy Conservation, Alternative Energies, Advanced Combustion, Advanced Technologies, and Education and Outreach.
