ISBN 3-030-68502-0

Edizione [1st ed. 2021.]

Descrizione fisica 1 online resource (XXIII, 657 p. 180 illus., 126 illus. in color.)

Disciplina 662.62

Soggetti Fossil fuels

Ecology

Energy systems

Lingua di pubblicazione Inglese

Formato Materiale a stampa

Livello bibliografico Monografia

Nota di bibliografia Includes bibliographical references and index.

Nota di contenuto

Natural dispersant in the stabilization of high concentration coal water

slurry -- Synergestic effect of natural and synthetic mixed surfactant system in the stabilization of high concentration coal water slurry -- Effect of surfactants in the stabilization and transportation of fly ashwater slurry -- Bulk utilization of fly ash in mining sector --

water slurry -- Bulk utilization of fly ash in mining sector --

Biodesulfurisation of coal using biotechnological approach, making coal a less harmful fuel -- Beneficiation of coal through combined Biological and Hydrometallurgical approaches: A prospective to produce quality, clean and less hazardous coal -- Biochar, Production for Green

Environment.

Sommario/riassunto This book presents the state of art of the several advanced approaches

to beneficiation of coal. The influence of recent technology attains the advantages of processing coal, purification studies, rheological behavior, and the mineral beneficiation. The experts collected in this volume have contributed significantly to the enrichment in the in depth knowledge not only in context of working knowledge, but also future prospects of clean coal technology. Describes mineral beneficiation of coal through physical-chemical processes; Examines rheological behavior and pipeline transport of coal water slurry resulting in

reduction of overall transportation cost of coal; Illustrates synergistic effect of natural and synthetic mixed surfactant system in the stabilization of high concentration coal water slurry.
