Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (201 p.)
Disciplina	300 304.6 339.5
Soggetti	Economics Demography International Political Economy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Research"--Cover.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Population Aging and its Economic and Financial Consequences -- Formal Models of Pension Systems -- Pension Preferences and Reform -- A Political-Economy Model -- Econometric Analyses of Cross-National Survey Data on Individual Pension Reform Preferences.
Sommario/riassunto	Oliver Pamp analyzes the likelihood and extent of pension reforms from a political-economy perspective. It is shown that voters' preferences for or against reforms are influenced by a societies' demographic development, the generosity of its existing public pension scheme and its electoral system. The author extensively reviews existing formal models of pension systems, discusses their merits and limitations, and develops a three-period overlapping generations model. The model's insights regarding individual reform preferences are then put into the context of different electoral systems, thus emphasizing the important role of electoral institutions in the aggregation of societal preferences. Finally, using cross-national survey data, logit and ordered-logit analyses tentatively confirm some of the model's main implications.
