

1.	Record Nr.	UNICAMPANIASUN0053070
	Titolo	Non-Euclidean geometry : a critical and historical study of its development / by Roberto Bonola
	Pubbl/distr/stampa	New York, : Dover, 1955
	ISBN	04-86600-27-0 978-04-86600-27-7
	Descrizione fisica	Pag. varia : ill. ; 20 cm.
	Soggetti	01-XX - History and biography [MSC 2020] 53A35 - Non-Euclidean differential geometry [MSC 2020]
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910488720503321
	Titolo	Emerging technologies for nanoparticle manufacturing / / Jayvadan K. Patel, Yashwant V. Pathak, editors
	Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021] ©2021
	ISBN	3-030-50703-3
	Descrizione fisica	1 online resource (604 pages)
	Disciplina	620.5
	Soggetti	Nanomanufacturing Nanopartícules Llibres electrònics
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Includes index.
	Nota di contenuto	Intro -- Foreword -- Preface -- Acknowledgments -- Contents -- Part I: Introduction and Biomedical Applications of Nanoparticles -- 1:

Introduction to Nanomaterials and Nanotechnology -- 1 Introduction
 -- 2 Nanomaterials -- 3 Why Are Nanoscale Materials: So Special
 and Unique? -- 4 Classification of Nanoscale Materials -- 4.1
 Classification of Nanomaterials Based on Their Origin -- 4.2
 Classification of Nanomaterials Based on the Chemical Composition --
 4.3 Material-Based Classification -- 4.4 Classification
 of Nanomaterials Based on Their Dimensions -- 5 Properties:
 The Physics at the Nanoscale -- 5.1 Confinement Effect -- 5.2 Surface
 Effects -- 5.3 Mechanical Properties -- 5.4 Structural Properties --
 5.5 Thermal Properties -- 5.6 Optical Properties -- 5.7 Magnetic
 Properties -- 6 Nanomaterials Synthesis Strategies -- 6.1 Bottom-Up
 Procedures -- 6.2 Top-Down Procedures -- 7 Conclusion --
 References -- 2: Biomedical Applications of Nanoparticles -- 1
 Introduction -- 1.1 Applications of Nanoparticles in Biomedical -- 2
 Conclusion -- References -- Part II: Polymeric Nanoparticles -- 3:
 Nanocrystallization and Nanoprecipitation Technologies -- 1
 Introduction -- 2 Definition -- 3 Prominent Attributes -- 3.1 Surface
 Area Enlargement -- 3.2 Increase in Saturation Solubility -- 3.3
 Crystalline or Amorphous Particle States -- 4 Production Technologies
 -- 5 Nanocrystallization and Nanoprecipitation Technologies -- 6
 Media Milling -- 6.1 Mechanism Involved -- 6.2 Selection of Bead Size
 -- 6.3 Particle Surface Modification -- 7 Cryo-Milling -- 7.1
 Definition -- 7.2 Ultra Cryo-Milling -- 8 Solvent-Antisolvent
 Precipitation -- 8.1 Fundamental Principle of Antisolvent Precipitation
 Techniques -- 8.2 Step-Up Antisolvent Precipitation Process -- 8.2.1
 Mixing -- 8.2.2 Mixing Devices.
 9 Role of Stabilizer in Antisolvent Precipitation Techniques -- 10
 Future Perspectives -- References -- 4: Microfluidics Technology
 for Nanoparticles and Equipment -- 1 Introduction -- 2 Principle
 Foundation -- 3 Mixing -- 3.1 Active Micromixers -- 3.2 Passive
 Micromixers -- 4 Microfluidic Reactors: Features for the Manufacture
 of Nanoparticles -- 5 Design of the Reactor -- 6 Fabrication
 of Microfluidic Devices -- 7 Microfluidic Devices: Types -- 8
 Formulation of Nano Drug Delivery System Using Microfluidics -- 8.1
 Pure Drug Nanoparticles -- 8.1.1 Crystalline Drug Nanoparticles -- 8.2
 Amorphous Drug Nanoparticles -- 8.3 API Loaded Nanoparticles
 Generated Using Microfluidic Technology -- 9 Microfluidic and Bulk
 Technologies: Comparison (Jahn et al. 2007) -- 10 Microfluidics:
 Nanoparticles Drug Delivery -- 10.1 Flow Focusing Method -- 10.2
 Micro-vortices Method -- 10.3 Chaotic Flow Method -- 10.4 Droplets
 Method -- 10.5 Other Methods -- 11 Microfluidics: Nanoparticles
 Characterization -- 11.1 Characterization of Particle Size
 and Morphology -- 11.2 Charge Characterization -- 11.3
 Characterization of Drug Loading and Drug Release -- 12
 Microfluidics: Nanoparticle Evaluation -- 13 Production
 of Nanoparticles Using Microfluidic Devices -- 13.1 Lipid Nanoparticles
 (LNPs) -- 13.2 Polymeric Nanoparticles -- 13.3 Theranostic
 Nanoparticles -- 14 Microfluidic Tools for Nanoparticles Investigation
 -- 14.1 Organ-on-a-Chip -- 14.2 Blood Vessel-on-a-Chip -- 14.3
 Blood Brain Barrier-on-a-Chip -- 14.4 Tumour-on-a-Chip -- 14.5
 Lung-on-a-Chip -- 14.6 Liver-on-a-Chip -- 14.7 Kidney-on-a-Chip
 -- 14.8 Heart-on-a-Chip -- 15 Companies Working on Microfluidic
 Technology -- 16 Future Developments -- 17 Conclusion --
 References -- 5: Production of Nanocomposites via Extrusion
 Techniques -- 1 Introduction.
 2 Polymeric Nanocomposites by Extrusion Method -- 3 Metal Matrix
 Nanocomposites Prepared by Extrusion Method -- 4 Conclusion --
 References -- 6: The Use of Supercritical Fluid Technologies

for Nanoparticle Production -- 1 Introduction -- 2 Supercritical Fluid Technology -- 3 Supercritical Fluids -- 4 Supercritical Processes for Nanoparticles Manufacturing -- 4.1 Particles from Gas-Saturated Solutions (PGSS) -- 4.2 Rapid Expansion of Supercritical Solutions (RESS) -- 4.3 Gas Anti-solvent Processes (GAS) -- 4.4 Supercritical Anti-solvent Processes (SAS) -- 4.5 Aerosol Solvent Extraction System (ASES) -- 4.6 Supercritical Anti-solvent with Enhanced Mass Transfer (SAS-EM) -- 4.7 Solution-Enhanced Dispersion by Supercritical Fluids (SEDS) -- 4.8 Suspension-Enhanced Dispersion by Supercritical Fluids (SpEDS Process) -- 4.9 Supercritical Assisted Atomization (SAA) -- 5 Application of SCF for Production of Nanoparticles -- 6 Summary and Future Perspective -- References -- 7: Salting Out and Ionic Gelation Manufacturing Techniques for Nanoparticles -- 1 Introduction -- 2 Nanotechnology in Drug Delivery Systems -- 3 Polymeric Nanoparticles -- 4 Drug Releasing Mechanism of Nanoparticles -- 5 Development of Polymeric Nanoparticles -- 5.1 Polymerization -- 5.1.1 Emulsion-Polymerization Technique -- 5.1.2 Interfacial Polymerization Technique -- 5.2 Development of Polymeric Nanoparticles From Preformed Polymers -- 5.2.1 Emulsification and Solvent Evaporation Method -- 5.2.2 Solvent Displacement Technique -- 5.2.3 Interfacial Deposition Technique -- 5.2.4 Emulsification and Solvent Diffusion -- 5.2.5 Salting-Out Method -- Effect of Various Parameters on Salting-Out Technique -- Advantages of the Salting-Out Method -- Disadvantages of the Salting-Out Method -- Scale-Up of the Salting-Out Method. Effect of Process Parameters on the Quality of the Nanoformulation During the Scale-Up of Method -- The Theoretical Model for the Preparation of Nanoparticles by the Salting-Out Method -- Relation of the Rate of Stirring to the Nanoparticle Size -- Model for Drug Transport From the Salted-Out Scaffold -- Salting-Out Method and Transition of Polymer Properties -- Applications of the Salting-Out Method -- Preparation of PLGA- and PLA-Based Nanoformulations -- Preparation of Polymeric Nanoparticles for Gene Therapy by the Salting-Out Method -- Interactions Between Crosslinking Ions and Polymeric Chains -- Combination of the Salting-Out Method with Other Methods -- Emulsion Solvent Evaporation-Salting-Out Technique -- Emulsion-Based and Aqueous-Based Salting-Out Method -- 5.2.6 Supercritical Fluid Technology -- 5.2.7 Rapid Expansion of Supercritical Solution (RESS) -- 5.2.8 Rapid Expansion of Supercritical Solution into a Liquid Solvent -- 5.2.9 Electrospraying Technology -- 5.2.10 Ionic Gelation Method -- Chitosan-Based Nanoformulations -- Characterization of Chitosan -- Molecular Weight Determination -- Calculation of the Degree of Deacetylation -- Chitosan-Based Nanoparticles and Ionic Gelation Method -- 5.2.11 Microreactor Application in the Preparation of Chitosan Nanoparticles by Ionic Gelation Method -- 5.2.12 Theoretical Analysis of Nanoparticle Preparation by Ionic Gelation Method in a Microreactor -- 5.2.13 Hydrogels of Drug-Loaded Chitosan-Based Nanoparticle -- 5.2.14 Preparation of Alginate-Based Nanoparticles by Ionic Gelation Method -- Alginate Hydrogels -- Factors Influencing the Crosslinking Degree of Alginate-Based Hydrogels -- Evaluation of Hydrogels -- Preparation of Sodium Alginate Nanoparticles by Ionic Gelation Method -- Preparation Sodium Pectin-Based Nanoparticles by Ionic Gelation Method. Ionic Gelation Method for the Preparation of Nanogels -- Ionic Gelation Method for the Development of Nanoparticles Loaded Films -- 5.3 Effect of Process Parameters on the Quality of Nanoformulations -- 5.3.1 Polymer -- 5.3.2 Crosslinking Agent -- 5.3.3 Polymer and Drug

Ratio -- 5.3.4 Sonication -- 5.4 Effect of Morphological and Physicochemical Properties on the Quality of Nanoformulation -- 5.4.1 Particle Size -- 5.4.2 Drug Loading and Entrapment Efficiency -- 5.4.3 Drug Release Kinetics -- 5.4.4 Degree of Swelling -- 5.4.5 Zeta Potential -- 5.4.6 Cellular Uptake of Nanoparticles -- 5.5 Modified Traditional Methods for the Development of Nanoparticles -- 5.5.1 Dialysis -- 5.5.2 Membrane Evaporation and Emulsion Technique -- 5.5.3 Premix Membrane Emulsification -- 5.5.4 Spray-Dry Method -- 5.5.5 Spray Solvent Displacement Combined with Dialysis -- 6 Conclusion -- References -- 8: Nanogel Synthesis by Irradiation of Aqueous Polymer Solutions -- 1 Introduction -- 2 Nanosized Particles in Medicine -- 3 Nanogels: Highlights and Applications -- 4 Synthesis Methods of Nanogels -- 4.1 Crosslinking/Polymerization of Monomer or Monomer Mixtures -- 4.2 Crosslinking of Preformed Polymers -- 5 Radiation-Induced Synthesis of Nanogels -- 5.1 Radiation Chemistry of Aqueous Systems -- 6 Conclusions and Future Prospects -- References -- 9: Cellulose Acetate-Based Nanofibers: Synthesis, Manufacturing, and Applications -- 1 Introduction -- 2 Derivatives of CA Polymer -- 3 Synthesis and Manufacturing of CA-Based Nanofibers -- 3.1 Electrospinning Process and Mechanism -- 3.2 Solvent Selection -- 3.2.1 Acetone-Based Solvent Systems -- (a) Using Water Acetone System -- (b) Acetone-DMF System -- (c) Using Acetone-DMAc Solvents -- 3.2.2 Other Solvent Systems -- 3.3 Deacetylation Study -- 4 Application of CA Nanofibers. 4.1 Antibacterial Application.
