Sommario/riassunto	The present Catalogue comprises information on 48 genera and 1802 valid species of the coleopterous subfamily Scaphidiinae. Unlike previous catalogues of the group, it gives exact type localities, depositories and sexes of primary types whenever traceable. Genera are listed with their type species and grammatical gender. References are given to subsequent taxonomic and nomenclatural acts, records, and to all other relevant information. Distributional information is provided per country, for larger or insular countries per subunits. An overview of fungus and slime mould hosts is annexed. The references to all taxa have been checked by the author. Intrasubspecific entities and priorities are dealt to comply with the ICZN. Nomenclatural problems are highlighted, and several new records are given. Extinct taxa are listed separately.
