'I

| Sommario/riassunto | This book offers an important contribution to a better understanding of the specific and the general in wartime. It examines how people cope and adjust to situations of war, depending upon whether these are low-intensity or high-intensity ones, on whether they are brief phases of conflict or long enduring periods of violence, with or without intermittent spells of peace. Of particular interest is the exploration of a largely new dimension of social interaction - that of the internet, thus providing a bridge between local concerns and global networks. |
