

1. Record Nr.	UNINA9910495188803321
Autore	James Gareth (Gareth Michael)
Titolo	An Introduction to Statistical Learning : with Applications in R // by Gareth James, Daniela Witten, Trevor Hastie, Robert Tibshirani
Pubbl/distr/stampa	New York, NY : , : Springer US : , : Imprint : Springer, , 2021
ISBN	1-0716-1418-5
Edizione	[Second Edition.]
Descrizione fisica	1 online resource (xv, 607 p : il. col.)
Collana	Springer Texts in Statistics, , 2197-4136
Soggetti	<p>Statistics</p> <p>Mathematical statistics - Data processing</p> <p>Artificial intelligence</p> <p>Statistical Theory and Methods</p> <p>Statistics and Computing</p> <p>Artificial Intelligence</p> <p>Estadística matemàtica</p> <p>Models matemàtics</p> <p>R (Llenguatge de programació)</p> <p>Llibres electrònics</p>
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	<p>Preface -- 1 Introduction -- 2 Statistical Learning -- 3 Linear Regression -- 4 Classification -- 5 Resampling Methods -- 6 Linear Model Selection and Regularization -- 7 Moving Beyond Linearity -- 8 Tree-Based Methods -- 9 Support Vector Machines -- 10 Deep Learning -- 11 Survival Analysis and Censored Data -- 12 Unsupervised Learning -- 13 Multiple Testing -- Index.</p>
Sommario/riassunto	<p>An Introduction to Statistical Learning provides an accessible overview of the field of statistical learning, an essential toolset for making sense of the vast and complex data sets that have emerged in fields ranging from biology to finance to marketing to astrophysics in the past twenty years. This book presents some of the most important modeling and prediction techniques, along with relevant applications. Topics include linear regression, classification, resampling methods, shrinkage</p>

approaches, tree-based methods, support vector machines, clustering, deep learning, survival analysis, multiple testing, and more. Color graphics and real-world examples are used to illustrate the methods presented. Since the goal of this textbook is to facilitate the use of these statistical learning techniques by practitioners in science, industry, and other fields, each chapter contains a tutorial on implementing the analyses and methods presented in R, an extremely popular open source statistical software platform. Two of the authors co-wrote *The Elements of Statistical Learning* (Hastie, Tibshirani and Friedman, 2nd edition 2009), a popular reference book for statistics and machine learning researchers. *An Introduction to Statistical Learning* covers many of the same topics, but at a level accessible to a much broader audience. This book is targeted at statisticians and non-statisticians alike who wish to use cutting-edge statistical learning techniques to analyze their data. The text assumes only a previous course in linear regression and no knowledge of matrix algebra. This Second Edition features new chapters on deep learning, survival analysis, and multiple testing, as well as expanded treatments of naïve Bayes, generalized linear models, Bayesian additive regression trees, and matrix completion. R code has been updated throughout to ensure compatibility.
