Sommario/riassunto	The focus of this carefully selected volume concerns the existence, frequency, and form of composite/complex predicates (the "take a look" construction) in earlier periods of the English language, an area of scholarship which has been virtually neglected. The various contributions seek to understand the collocational and idiomatic aspects of these structures, as well as of related structures such as

complex prepositions (e.g., "on account of") and phrasal verbs (e.g., "look up"), in their earliest manifestations. Moreover, study of these constructions at the individual stages of English leads

Sommario/riassunto	This textbook for master programs in economics offers a comprehensive overview of microeconomics. It employs a carefully graded approach where basic game theory concepts are already explained within the simpler decision framework. The unavoidable mathematical content is supplied when needed, not in an appendix. The book covers a lot of ground, from decision theory to game theory, from bargaining to auction theory, from household theory to oligopoly theory, and from the theory of general equilibrium to regulation theory. Additionally, cooperative game theory is introduced. This textbook has been recommended and developed for university courses in Germany,

Austria and Switzerland. Content Basic decision and preference theory  
Household theory and theory of the firm Games and industrial  
organization Bargaining theory and Pareto optimality Bayesian games  
and mechanism design Perfect competition and competition policy  
Contracts and principal-agent theories The author Prof. Dr. Harald  
Wiese holds the Chair of Microeconomics at the University of Leipzig.
