Sommario/riassunto

Pre- and post-operative care of transplant patients is an aspect of Critical Care Medicine in which most ICU physicians and nurses have received little or no formal training and are left to cope with this complex population with only incomplete "on the job experience" as a guide. In response to this clinical knowledge gap, ICU Care of Abdominal Organ Transplant Patients provides a concise at the bedside resource for intensivists, surgeons, and nurses caring for abdominal organ transplant patients before and after surgery. In a concise, practical style, the authors offer concrete solutions to

Autore	Bove Giuseppe
Titolo	Methods for the Analysis of Asymmetric Proximity Data // by Giuseppe Bove, Akinori Okada, Donatella Vicari
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2021
ISBN	981-16-3172-7
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (X, 194 p. 68 illus., 39 illus. in color.)
Collana	Behaviormetrics: Quantitative Approaches to Human Behavior, , 2524-4035 ; ; 7
Disciplina	519.24
Soggetti	Statistics Mathematical statistics - Data processing Applied Statistics Statistics and Computing Statistical Theory and Methods
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Methods for direct representation of asymmetry -- Analysis of symmetry and skew-symmetry -- Cluster analysis for asymmetry -- Multiway models -- Software. .
Sommario/riassunto	This book provides an accessible introduction and practical guidelines to apply asymmetric multidimensional scaling, cluster analysis, and related methods to asymmetric one-mode two-way and three-way asymmetric data. A major objective of this book is to present to applied researchers a set of methods and algorithms for graphical representation and clustering of asymmetric relationships. Data frequently concern measurements of asymmetric relationships between pairs of objects from a given set (e.g., subjects, variables, attributes, ...), collected in one or more matrices. Examples abound in many different fields such as psychology, sociology, marketing research, and linguistics and more recently several applications have appeared in technological areas including cybernetics, air traffic control, robotics, and network analysis. The capabilities of the presented algorithms are illustrated by carefully chosen examples and supported by extensive data analyses. A review of the specialized statistical software available

for the applications is also provided. This monograph is highly recommended to readers who need a complete and up-to-date reference on methods for asymmetric proximity data analysis.
