Livello bibliografico	Monografia
Sommario/riassunto	Dans la seconde moitié du XVIIIe siècle, la misère de la Sologne n'apparaît plus comme inéluctable et son amélioration devient une priorité pour les esprits éclairés. Partir à l'aube de ce mouvement de brassage d'idées généreuses par une élite animée d'idéal, pour aller jusqu'à sa rénovation sous le Second Empire, tel est le cheminement qui s'est imposé. Dans cette longue histoire d'innovations agricoles et pastorales, d'essais et d'expériences agraires, il était possible de mettre les hommes au premier plan. Or, cette place, donnée tant aux paysans qu'aux innovateurs n'était-elle pas trop belle ? Un autre ordre s'est dessiné avec le fait que les moutons, base de l'économie solognote, pouvaient également figurer sur le devant de la scène, jusqu'à ce que le boisement pointe ses premières pousses pour faire éclater le printemps de la rénovation du pays. Cette approche

historique n'a pas occulté les liens qui unissent intimement les animaux, les immenses étendues de landes et les hommes, dans une histoire dynamique où ne cessent d'interagir des résistances traditionnelles, des apports innovants, des inerties institutionnelles et les réalités économiques. Dans cette grande fresque, il a fallu aller vers des horizons nouveaux qui dépassent largement les limites de la Sologne, et les résultats ont été à la mesure des espoirs de la recherche.

Sommario/riassunto

This book illustrates the recent picture of statistical physics of polymers and polymer solutions that emerges from some paradigms of contemporary science joint together. Among its principal aims are discussing the consequences of a novel self-diffusion theory, which benefits from an extension towards relativistic-like principles, and the generalization of usual concepts met in polymer science in terms of geometry alone. The monograph gives the whole fundamentals necessary to handle the view proposed, which is set in the final chapters. All the formers see about to provide the reader with a co
