	functions. Then you will configure tools such as Minikube to run Kubernetes. Once you are up-and-running, you will install and configure Kubeless, your first step towards running Function as a Service (FaaS) on Kubernetes. Then you will gradually move towards running Fission, a framework used for managing serverless functions on Kubernetes environments. Towards the end of the book, you will also work with Kubernetes functions on public and private clouds. By the end of this book, we will have mastered using Function as a Service on Kubernetes environments. Sommario/riassunto	Los alfareros golondrinos salen regularmente de sus pueblos base para producir vasijas de cerámica en sus pueblos destino. Estos artesanos itinerantes han sido etnográficamente regis-trados en territorio peruano desde fines del siglo XIX. Sin embargo, los arqueólogos e historiadores del arte suelen ig-norarlos en sus explicaciones sobre la cultura material andina, insistiendo en una imagen estática del pasado remoto. Las grandes líneas interpretativas del mundo precolonial

andino se sustentan en la cerámica decorada y en un modelo ‘tradi-cional’ de alfarero: aquel que solo trabaja en su pueblo base. Las explicaciones efectivamente comprensivas de la historia andina deben incorporar la cerámica no decorada y los diver-sos tipos de alfarero. En esta perspectiva, caracterizaremos a los golondrinos para proponer una lectura dinámica de la evidencia cerámica andina.
