Sommario/riassunto	"Adoptions that cross the lines of culture, race and nation are a major consequence of conflicts around the globe, yet their histories and representations have rarely been considered. Life Lines: Writing Transcultural Adoption is the first critical study to explore narratives of transcultural adoption from contemporary Britain, Ireland and America: fictions, films and memoirs made by those within the adoption 'triad' or those concerned with the pain and possibilities of transcultural adoption. While acknowledging the sobering inequalities which engender transcultural adoptions and the lasting upset of sundered relations, at the same time John McLeod considers the transfigurative and creative propensity of imagining transcultural adoption as radically calling into question ideas of biogenetic attachment, racial genealogy, cultural identity and normative family-making. How might the

predicament of 'being adopted' transculturally enable the transformative agency of 'adoptive being' for all? Exploring works by Andrea Levy, Barbara Kingsolver, Toni Morrison, Sebastian Barry, Caryl Phillips, Jackie Kay and several others, Life Lines makes a groundbreaking intervention in such fields as transcultural studies, postcolonial thought, and adoption theory and practice."--Bloomsbury Publishing.

Sommario/riassunto	This book provides insights on regulatory effectiveness in the field of food safety, by focusing on the variety of institutional factors affecting regulatory outcomes. Drawing upon the Institutional Analysis and Development framework, it investigates differences in effectiveness of food safety regulation and explains them by differences in domestic governance designs, by applying Qualitative Comparative Analysis. The empirical focus of the book is the food safety governance designs of 15 EU Member States, which are investigated through the collection of an

original dataset inclusive of measures of independence and accountability of the domestic food safety agencies, of policy capacity and of food safety delivered. The results show the prominent role of the institutional dimension of policy capacity in producing regulatory effectiveness, in conjunction with an integrated model of distribution of the regulatory tasks. As to ineffective governance, the conjunction of low independence or low accountability with low institutional capacity produce ineffective responses. Giulia Bazzan is a researcher at the Department of Food and Resource Economics, University of Copenhagen, Denmark.
