

1. Record Nr.	UNINA9910502986103321
Autore	Clark Jane
Titolo	Calculate the orbit of Mars! : an observing challenge and historical adventure / / Jane Clark
Pubbl/distr/stampa	Cham, Switzerland : , : Springer International Publishing, , [2021] ©2021
ISBN	3-030-78267-0
Descrizione fisica	1 online resource (319 pages)
Disciplina	523.43
Soggetti	Mars (Planet) Orbit
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Acknowledgements -- Contents -- About the Author -- Chapter 1: In the Beginning -- Ptolemy's Model: Salient Features -- The Copernican Revolution: The Pun That Keeps oving -- Tycho Brahe, the Greatest Pre-telescope Observer -- Tycho and Mathematics -- Tycho's Instruments -- Galileo - Telescopes and Free Fall -- Free Fall and Motion -- The Telescope Bursts onto the Scene -- Encounter with the Inquisition -- Chapter 2: Read My Ellipses -- Kepler -- Ellipses -- Chapter 3: The Behaviour of Two Bodies in Orbit -- Christiaan Huyghens (1629-1695) -- Sir Isaac Newton (1642-1727): The Great Synthesizer -- Universal Gravitation -- Gravity Due to Point Masses and Spheres -- Angular Momentum and Its Implications -- The Bit Where Conic Sections Come In -- Time Evolution -- A Brief Aside: the Word Anomaly -- The Moon: A Challenge for Newtonian Physics -- Canonical Units -- Energy -- The Orbit Tells Us What the Force Law Is -- Chapter 4: Least Squares Fit to Sets of Equations -- Least Squares Fitting Subroutine -- Chapter 5: The Orbit of the Earth -- Sunny Side Down, Please -- From Solar Midday to Orbit -- Sorting Out Some Definitions -- Further Geometric Gymnastics with Ellipses -- Tilting My Lance at Obliquity -- Getting Around to Earth's Orbit -- Chapter 6: Here's Looking at You, Mars! -- Equipment -- Guiding -- Photographic Technique -- How I Made Measurements from Pictures Like Fig. 6.7 -- How to Obtain the Position of Mars from the Star Positios -- Main Program -- Angle Unit Changing

Subroutines -- Least Squares Fitting Subroutine LSQFIT Has
to Be Added -- Distance Unit Changing Subroutines -- Results -- The
2009-2010 Apparition of Mars -- Later Observing Campaigns -- Data
from 2011 to 2012 (Table 6.5 and Fig. 6.31) -- Data from 2020
(Table 6.6 and Fig. 6.32) -- Chapter 7: First Shot at the Orbit of Mars.
Non-coplanar Orbits Facing in Random Directions -- Rotations -- What
These Angles Are Used for -- Herget's Method -- Lagrange's f and g
Functions -- The Sector-Triangle Ratio -- Introduction of Kepler's
Equation -- Solution of Eqs. (7.89), (7.101) and (7.104) -- Solving Eq.
(7.1) with Known Magnitude but Unknown Direction of Sun-Planet
Distance -- Eureka! (Part One) -- Obtaining the Orbital Elements
from Two Radius Vectors -- Software Listing -- Main Program --
Calculate Ascending Node -- Convert Observation Times to Canonical
Units -- Use Escobal's Methods to Calculate Various Quantities -- Use
Methods Given Above to Calculate the Longitude and Passage Time
of Perihelion -- This Is Basically the Subroutine Described in Chap. 4 --
Eureka! (Part Two) -- Chapter 8: Refining the Preliminary Orbit --
Least-Squares Curve Fitting -- Gambling on Monte Carlo -- Monte
Carlo Source Code -- Manual Adjustment of Orbits -- Using Knowledge
of the 2020 Opposition -- Conclusions Drawn -- Da Capo al Fine: Can
I Fit Tycho's Data? -- How Well Did I Do? -- Appendix 1: Parabolas
and Hyperbolas -- Deriving the Equation of a Hyperbola in Polar
Coordinates -- Deriving the Equation of a Parabola in Polar Coordinates
-- Appendix 2: Multiplying Three Vectors -- Appendix 3: Proof
of Trigonometric Addition Formulae for All Angles -- References --
Index.
