Sommario/riassunto	This book, set out over three-volumes, provides a comprehensive history of economic thought in the 20th century with special attention to the cultural and historical background in the development of theories, to the leading or the peripheral research communities and their interactions, and finally to an assessment and critical appreciation of economic theories. Volume II addresses economic theory in the period between the two world wars in which the economic theory went

through a process of criticism of old mainstream, deconstruction and reconstruction and theoretical ferment which involved the intellectual communities of economists emphasizing their nature of evolving interacting entities. This work provides a significant and original contribution to the history of economic thought and gives insight to the thinking of some of the major international figures in economics. It will appeal to students, scholars and the more informed reader wishing to further their understanding of the history of the discipline. Roberto Marchionatti is Professor of Economics, University of Torino, and Fellow of the Accademia delle Scienze di Torino. He has been Visiting Scholar at the Universities of New York and Cambridge. He is the editor of *Annals of Fondazione Luigi Einaudi: An Interdisciplinary Journal of Economics, History and Political Science*.
