

1. Record Nr.	UNINA9910506398603321
Autore	Cecchi Teresa
Titolo	Biobased products from food sector waste : bioplastics, biocomposites, and biocascading // Teresa Cecchi, Carla De Carolis
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021] ©2021
ISBN	3-030-63436-1
Descrizione fisica	1 online resource (426 pages)
Disciplina	363.7288
Soggetti	Food waste - Recycling Reciclatge de residus Biotecnologia alimentària Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Contents -- Part I: Introduction -- Chapter 1: Food Waste in the Sustainable Development Framework -- 1.1 The Triple Bottom Line: "People, Planet, and Profit" -- 1.2 Decoupling of Production from Fossil Feedstock and the Breakthrough of Renewable Resources -- Bibliography -- Chapter 2: Food Processing Industries, Food Waste Classification and Handling, Target Compounds -- 2.1 Fruits and Vegetables -- 2.1.1 Apple -- 2.1.2 Berries -- 2.1.3 Citrus Fruits -- 2.1.4 Exotic Fruits -- 2.1.5 Tomatoes -- 2.1.6 Pulses -- 2.2 Winemaking Industries -- 2.2.1 Winery By-Product for the Food Industry -- 2.2.2 Winery By-Product for Cosmetics and Pharmaceutical Industry -- 2.2.3 Winery By-Product for the Environment, Agriculture, and Animal Feeding -- 2.2.4 Winery By-Product as Biorefinery Feedstock -- 2.3 Cereals and Tubers -- 2.3.1 Soft and Durum Wheat Processing -- 2.3.2 ByProducts from Rice Processing ( <i>Oryza sativa</i> L.) -- 2.3.3 Potatoes -- 2.4 Breweries -- 2.5 Olive Oil and Edible Oil Industry -- 2.6 Meat Products -- 2.7 Fishery -- 2.8 Dairy Products -- 2.9 Kitchen Waste -- Bibliography -- Chapter 3: Current State of Art of the Usual Food Waste Valorization -- 3.1 Introduction -- 3.2 Waste Hierarchy Applied to Biomass Residual and Food Wastes -- 3.3 Food

Wastes for Animal Feed -- 3.4 Composting for Biofertilizers -- 3.5 Biofuels: First, Second and Third Generation -- 3.5.1 Biofuels Production and Technology Overview -- 3.5.2 Biodiesel (FAME/FAEE) by UCOs - Used Cooking Oil -- 3.5.3 Bioethanol by Fermentation of Carbohydrates -- 3.5.4 Anaerobic Digestion of Biomass Residues and Food Wastes -- 3.6 Technology Progress for Advanced Biofuels -- Bibliography -- Part II: Innovative Food Waste Upcycling -- Chapter 4: Biocascading: General Strategy for the Recovery of Valuable Substances from Food Waste -- 4.1 Introduction -- 4.2 Chemical Methods. 4.2.1 Pretreatment -- 4.2.1.1 Solid Samples -- 4.2.1.2 Watery Food Waste or Food Wastewaters -- 4.2.2 Separation of Small Molecules from Macromolecules -- 4.2.2.1 Alcohol Precipitation -- 4.2.2.2 Isoelectric Precipitation -- 4.2.2.3 Ultrafiltration -- 4.2.2.4 Gas Aphrons -- 4.2.2.5 Ultrasound-Assisted Crystallization -- 4.2.2.6 Extrusion -- 4.2.3 Extraction -- 4.2.3.1 Solvent Extraction -- 4.2.3.2 Pressurized Liquid Extraction -- 4.2.3.3 Steam Distillation and Hydrodistillation -- 4.2.3.4 Supercritical Fluid Extraction -- 4.2.3.5 Microwave-Assisted Fluid Extraction -- 4.2.3.6 Ultrasound-Assisted Extraction -- 4.2.3.7 Pulsed Electric Field Extraction -- 4.2.3.8 Other Emerging Extraction Technologies -- 4.2.4 Purification and Isolation of Target Compounds -- 4.2.4.1 Chromatographic Methods -- 4.2.4.2 Nanofiltration and Reverse Osmosis -- 4.2.4.3 Electrodialysis -- 4.2.4.4 Magnetic Fishing -- 4.2.4.5 Aqueous Two-Phase System -- 4.2.5 Product Formation -- 4.2.5.1 Emulsification -- 4.2.5.2 Microencapsulation and Nanoencapsulation -- 4.3 Bioconversion -- 4.3.1 Anaerobic Fermentation/Digestion -- 4.3.1.1 Sugars -- 4.3.1.2 Biohydrogen -- 4.3.1.3 Biomethane -- 4.3.1.4 Biohythane -- 4.3.1.5 Volatile Fatty Acids -- 4.3.1.6 Medium Chain Fatty Acids (C6-C10) -- 4.3.2 Solventogenesis -- 4.3.2.1 Bio-Ethanol -- 4.3.2.2 Bio-Butanol -- 4.3.3 Biodiesel Production from Renewable Sources: Waste Oil and Oleaginous Metabolism -- 4.3.4 Microbial Electrochemical Technologies -- 4.3.4.1 Microbial Fuel Cell -- 4.3.4.2 Electro-Fermentation -- 4.4 Thermal and Thermochemical Methods -- 4.5 Conclusions -- Bibliography -- Chapter 5: Biocascading: Platform Molecules, Value Added Chemicals, and Bioactives -- 5.1 Carbohydrates -- 5.1.1 Starch and Lignocellulosic Biomass -- 5.1.2 Glucose and Other Simple Sugars -- 5.1.3 Pectin -- 5.1.4 Xanthan Gum -- 5.2 Lipids. 5.3 Protein, Peptides, Amino Acids -- 5.4 Organic Acids -- 5.4.1 Volatile Organic Acids (VFA) -- 5.4.2 1,4-Dicarboxylic Acids (Fumaric, Succinic, Malic Acid) -- 5.4.3 Lactic Acid -- 5.4.4 Gluconic and Glucaric Acids -- 5.4.5 Acrylic Acid -- 5.4.6 Adipic Acid -- 5.4.7 Citric Acid -- 5.5 Phosphate -- 5.6 Nutraceuticals: Antioxidants and Other Bioactives -- 5.7 Enzymes -- 5.7.1 Amylase -- 5.7.2 Cellulase -- 5.7.3 Xylanase -- 5.7.4 Pectinase -- 5.7.5 Protease -- 5.8 Activated Carbon Adsorbent and Biochar -- 5.9 Chitin and Chitosan -- 5.10 pH Indicator Films -- 5.11 Pigments -- 5.12 Single-Cell Protein (SCP) and Fungal Biomass -- Bibliography -- Chapter 6: Biobased Polymers from Food Waste Feedstock and Their Synthesis -- 6.1 Introduction -- 6.2 Polylactic Acid (PLA) -- 6.2.1 FWs as Feedstocks -- 6.2.2 Synthesis -- 6.2.3 Properties and Uses -- 6.3 Polyhydroxyalkanoate (PHA) -- 6.3.1 FWs as Feedstocks -- 6.3.2 Biosynthesis -- 6.3.3 Properties and Uses -- 6.4 Polybutylene Succinate (PBS) -- 6.4.1 FW as Feedstocks -- 6.4.2 Synthesis -- 6.4.3 Properties and Uses -- 6.5 Polyglycolic Acid (PGA) -- 6.5.1 FWs as Feedstocks -- 6.5.2 Synthesis -- 6.5.3 Properties and Uses -- 6.6 Biobased Thermosetting Polymers -- 6.6.1 Phenolic Resins -- 6.6.2 Epoxy and Polyurethane Resins -- 6.7 Copolymerization and Blending -- 6.7.1 Copolymers -- 6.7.2 Blends -- 6.8 Improvement of Bioplastic

Properties to Bridge the Gap to Conventional Plastics -- 6.9  
Conclusions -- Bibliography -- Chapter 7: Biocomposites from Food  
Waste -- 7.1 Biocomposites from Biobased Thermosetting Polymers  
Containing FW Biofillers -- 7.1.1 Phenolic Resins -- 7.1.2 Epoxy  
and Polyurethane Resins -- 7.2 Biocomposites from Biobased  
Thermoplastics Containing FW Biofillers -- 7.3 Biocomposites  
from FossilBased Plastics and Elastomers Containing FW Biofillers.  
7.4 Biocomposites from Biobased Polymers Containing Inorganic Fillers.  
Case Study: PLA -- 7.5 Challenging Barriers in the Biocomposite Field  
-- Bibliography -- Part III: Characterization of Biobased Products --  
Chapter 8: Mechanical Characterization of Biobased Products from Food  
Waste -- 8.1 Tensile Testing -- 8.2 Hardness Testing -- 8.3 Tear  
Strength -- 8.4 Flexural Testing -- 8.5 Impact Resistance Testing --  
8.6 Density Testing -- 8.7 Compression Testing -- 8.8 Creep -- 8.9  
Fatigue -- 8.10 Friction -- 8.11 Wear -- 8.12 Mechanical Performance  
of Bioplastics -- Bibliography -- Chapter 9: Physico-chemical  
Characterization of Bioplastics and Biocomposites -- 9.1 Morphology.  
Scanning Electron Microscopy (SEM) -- 9.2 Crystallinity and Thermal  
Stability. Differential Scanning Calorimetry (DSC)  
and Thermogravimetric Analysis (TGA) -- 9.3 Nuclear Magnetic  
Resonance (NMR) -- 9.4 Barrier and Permeation Properties,  
Transmission Rate Measurement -- 9.5 Biodegradation  
and Composting -- 9.6 Determination of the Biobased Carbon Content  
-- 9.7 Chemical Compatibility -- Bibliography -- Part IV: Safety and  
Sustainability of Biobased Products from Food Waste -- Chapter 10:  
Assessment of the Safety of BioBased Products -- 10.1 Volatile Organic  
Compounds (VOCs) from Bioplastics -- 10.2 Catalyst Residues  
and Green Catalysts -- 10.3 Migration: Risks and Opportunities  
from Biobased Food Contact Materials -- 10.3.1 Biobased Barriers  
to Prevent Migration from Conventional Packaging Materials -- 10.3.2  
Biobased Products for Active and Smart Food Packaging -- 10.4  
Registration, Evaluation, Authorisation and Restriction of Chemicals  
(REACH) Regulation for Biobased Products -- Bibliography -- Chapter  
11: Life Cycle Assessment -- 11.1 Life Cycle Assessment Introduction  
-- 11.2 Biobased Products and Life Cycle Assessment.  
11.3 Carbon Assessment, Carbon Footprint and Product Environmental  
Footprint -- 11.4 Boosting Sustainable BBPs' Future -- Bibliography --  
Chapter 12: Digital Revolution Advantages: Efficient Processes  
and Sustainable Feedstock -- 12.1 Emergence the Food Value Chains:  
A Circular and Sustainable Economy Approach -- 12.2 Support  
of the Rural Economy in the Horizon 2020 Framework -- Bibliography  
-- Chapter 13: Research Gap and Needs -- 13.1 Introduction -- 13.2  
From Waste to Wealth Using Green Chemistry: The Way to Long Term  
Sustainability -- 13.3 Exploitation of Non-Food Feedstock as Smart  
Alternative to Crops Usage for a Sustainable Bioeconomy -- 13.4  
BioBased Product Recycling -- 13.5 Conclusion -- Bibliography --  
Index.

---
