The role of religion in society -- The Netherlands as pluralist society -- Religion and security -- Religion as force for good -- Conclusion: -- Illustration acknowledgements -- About the editors
Sommario/riassunto	This book on water and climate change goes beyond the usual and

predictable analyses, by bringing religion and values into a discussion that is often dominated by technocratic solutions. The three case studies of Jakarta, Cape Town, and Amsterdam demonstrate the challenges of water management in urban areas and the role religion can play in addressing them. With representatives from science, politics, economics, and religion, as well as young voices, the book stimulates a values-driven dialogue on issues of water in times of climate change.
