Sommario/riassunto	This new edition of the Catalogue of Palaearctic Coleoptera gives a taxonomic overview of the most diverse group of all organisms living in the world-largest biogeographical area. The present volume is an updated edition of the first issue in 2003 but restricted to data published before the year 2000. It contains information about 33,914 taxa (together with synonyms), and increases the number of included species and other taxa by almost 5,000. In addition, thousands of species have their distributional data completed, and their ranks, systematic positions and nomenclature corrected. Almost two hundred

new acts fix systematics and nomenclature, and numerous problems are discussed. Even such well known genera as *Calosoma* and *Carabus*, or tribes as Bembidiini and Panagaeini, are completely reorganized compared to the previously published catalogues. Thus, the work is a scaffold for biotic surveys, ecological studies, and nature conservation. It responds to the urgent need of an assessment of the still remaining forms of life, threatened by the on-going destruction of habitats. Taxonomy provides the basic building blocks of our understanding of the diversity of life. It stems from innate human curiosity: confronted with an unknown species we ask first "what is it"? Taxonomists recognize species and other systematic entities (taxa), define them and place them within the framework of known organisms, providing means for their subsequent identification. Contributors are: Antonio Tomás Tomás Andújar, Carmelo Fernández Andújar, Michael Balkenohl, Igor Belousov, Yves Bousquet, Boleslav Bezina, Achille Casale, Hans Fery, Jan Farka, Pier Mauro Giachino, Henri Goulet, Martin Häckel, Jíí Hájek, Oldich Hovorka, Fritz Hieke, Jan Hrdlika, Charles Huber, Bernd Jaeger, Ilya Kabak, Boris M.
