                        Conclusion: researching, designing and running case study simulations.

   Sommario/riassunto   "First published in 1985, this book presents seven games for use in the
                        teaching and study of planning, urban studies or land administration.
                        These simulations are all built on researched case studies and deal with
                        a number of critical planning and developmental issues; for each one
                        the book provides full operational instructions and all gaming materials
                        required. The games in this volume cover a number of scenarios,
                        including the design of a mixed retail, social and service centre in a
                        new city, new development in a run-down inner city area, rehabilitation
                        or renewal of housing, tourist development in the Mediterranean and a
                        new cross-town motorway in a major north American city. In addition,
                        sets of guidelines for those wishing to design and operate their own

case study simulations are also included. This book will be a valuable resource for students of town planning or urban development who are keen to gain hands-on experience of using the professional skills they have acquired on their courses."--Provided by publisher.
