Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	'Labour Markets in Low-Income Countries' addresses some of the most important issues affecting labour markets in low-income countries. It builds heavily on the new research evidence that has been provided by the programme on Growth and Labour Markets in Low-Income Countries (GLM LIC), which was created as a partnership between UK Department for International Development (now part of the Foreign, Commonwealth, and Development Office) and the German IZA-Institute of Labor Economics in 2011. Across nine chapters dealing with different aspects of labour markets in developing countries, David Lam and Ahmed Elsayed provide lessons about what kinds of labour market programmes and policies can make a difference. Some of these lessons are about the difficulties that many well-intentioned programmes face when they are implemented.
