## Sommario/riassunto

From Constantinople to the Frontier: The City and the Cities provides twenty-five articles addressing the concept of centres and peripheries in the late antique and Byzantine worlds, focusing specifically on urban aspects of this paradigm. Spanning from the fourth to thirteenth centuries, and ranging from the later Roman empires to the early Caliphate and medieval New Rome, the chapters reveal the range of factors involved in the dialectic between City, cities, and frontier. Including contributions on political, social, literary, and artistic history, and covering geographical areas throughout the central and eastern Mediterranean, this volume provides a kaleidoscopic view of how human actions and relationships worked with, within, and between urban spaces and the periphery, and how these spaces and relationships were themselves ideologically constructed and understood. Contributors are Walter F. Beers, Lorenzo M. Bondioli, Christopher Bonura, Lynton Boshoff, Averil Cameron, Jeremiah Coogan, Robson Della Torre, Pavla Drápelová, Nicholas Evans, David Gyllenhaal, Franka Horvat, Theofili Kampianaki, Maximilian Lau, Valeria Flavia Lovato, Byron MacDougall, Nicholas S.M. #### Sommario/riassunto

With the start of 2020, the wrath of pandemic challenged the scientific community to develop more advanced drug delivery approaches for biomedical applications, endowing conventional drugs with additional therapeutic benefits and minimum side effects. Although significant advancements have been done in the field of drug delivery, there is a need to focus towards strategizing novel and improved drug delivery systems that should be convenient and cost-effective to the patients, and simultaneously they should also provide financial benefits to pharmaceutical companies. Controlled drug delivery technology offers ample opportunities and scope for improvising the therapeutic efficacy of drugs via optimizing the drug release rate and time. For this endeavour, smart nanomaterials have served as remarkable candidates for biomedical applications, owing to their ground-breaking properties and design. The development of such nanomaterials requires a broad knowledge related to their physio-chemical properties, molecular structure, mechanisms by which the nanomaterials interact with the cells, and methods by which drugs are released at the site of action. This knowledge must also be allied with the knowledge of signaling crosstalk mechanisms that are modulated by the nanomaterial-drugs composite. It can be anticipated that these emerging drug delivery technologies can facilitate the world to successfully encounter such pandemic outbursts in the future in a cost-effective and time-effective manner. The chapters in this book deal with the advanced technologies and approaches that can benefit advanced students, researchers, and industry experts in developing smart and intelligent nanomaterials for future biomedical applications, and development, manufacturing, and commercialization for controlled and targeted drug delivery.
