

1. Record Nr.	UNINA9910522984103321
Autore	Bauer Wolfgang, Dr.
Titolo	Hydropneumatic suspension systems // Wolfgang Bauer
Pubbl/distr/stampa	Berlin, Germany : , : Springer, , [2022] ©2022
ISBN	3-662-63772-3
Edizione	[Second edition.]
Descrizione fisica	1 online resource (313 pages)
Disciplina	629.243
Soggetti	Automobiles - Springs and suspension
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- Contents -- 1 Suspension Systems Basics -- 1.1 Requirements for Suspension Systems -- 1.1.1 Minimize Accelerations on the Isolated Side -- 1.1.2 Equalize Variations of Vertical Wheel Forces -- 1.2 Suspension Technology Basics -- 1.2.1 General Setup of a Suspension System -- 1.2.2 General Behavior of a Suspension System -- 1.2.3 Alteration of Suspension Parameters -- 1.3 Hydropneumatic Suspension Compared to Other Suspension Methods -- 1.3.1 Comparison of Spring Characteristics -- 1.3.2 Comparison of Damping Characteristics -- 1.3.3 Level Control -- 1.3.4 Non-functional Requirements -- 1.4 Applications for Hydropneumatic Suspension Systems -- 2 Spring and Damping Characteristics of Hydropneumatic Suspension Systems -- 2.1 General Setup and Working Principle -- 2.2 Spring Characteristics -- 2.2.1 Thermodynamic Background -- 2.2.2 Calculation Predeterminations -- 2.2.3 Non Preloaded Hydropneumatic Suspension Systems -- 2.2.4 Systems with Mechanical Preload -- 2.2.5 Systems with Constant Hydraulic Preload -- 2.2.6 Systems with Variable Hydraulic Preload -- 2.3 Damping Characteristics -- 2.3.1 Boundary Friction Damping -- 2.3.2 Fluid Friction Damping -- 2.3.3 End-of-Stroke Damping -- 2.4 Combined Operation of Spring and Damper -- 3 Dimensioning of the Hydropneumatic Suspension Hardware -- 3.1 Dimensioning of the Hydraulic Spring Components -- 3.1.1 Cylinder -- 3.1.2 Accumulator Gas Precharge -- 3.1.3 Detailed Calculation of p_0 and V_0 -- 3.2 Dimensioning of the Hydraulic Damping Elements -- 3.2.1

Single-Acting Cylinder in a System Without Hydraulic Preload -- 3.2.2
Double-Acting Cylinder in a System Without Hydraulic Preload -- 3.2.3
Double-Acting Cylinder in a System with Hydraulic Preload -- 3.2.4
End-of-Stroke Damping -- 4 Hydraulic Components Design -- 4.1
Cylinders -- 4.1.1 Function and Requirements -- 4.1.2 Types
of Cylinders.
4.1.3 Sealing Elements -- 4.1.4 End-of-Stroke Damping -- 4.1.5 Types
of Support Elements -- 4.2 Accumulators -- 4.2.1 Function
and Requirements -- 4.2.2 Types of Accumulators -- 4.2.3 Methods
to Reduce Diffusion Pressure Loss -- 4.2.4 Usage of Pressure Relief
Valves -- 4.2.5 Integration into Available Design Space -- 4.3 Flow
Resistors -- 4.3.1 Non Adjustable Orifices and Throttles -- 4.3.2 Flow
Direction Depending Resistors -- 4.3.3 Adjustable Flow Resistors --
4.4 Hydraulic Lines and Fittings -- 4.4.1 Function and Requirements --
4.4.2 Required Flow Cross Section -- 4.4.3 Tubes -- 4.4.4 Hoses --
4.4.5 Fittings -- 4.5 Control Manifolds -- 4.5.1 Functions
and Requirements -- 4.5.2 Block Design -- 5 Level Control -- 5.1 Self-
Pumping Suspension Elements -- 5.2 Mechanical Level Control
with External Hydraulic Power Supply -- 5.3 Electronic Level Control
with External Hydraulic Power Supply -- 5.3.1 Function -- 5.3.2
Hydraulic Circuits Using On/Off-Valves -- 5.3.3 Hydraulic Circuits
Using Proportional Valves -- 5.3.4 Control Algorithms -- 5.4 Electronic
Level Control with Dedicated Power Supply -- 6 Special Functions
of Hydropneumatic Suspension Systems -- 6.1 Suspension Lockout --
6.1.1 Lockout by Blocking the Hydraulic Circuit -- 6.1.2 Lockout
at the Compression End Stop -- 6.1.3 "Quasi-lockout" Through High
Spring Stiffness -- 6.2 Adjustment of the Zero Position -- 6.3
Alteration of Roll and Pitch Behavior -- 6.3.1 Coupling Cylinders
on Corresponding Sides -- 6.3.2 Decoupling Cylinders -- 6.3.3
Coupling Double-Action Cylinders on Opposite Sides -- 6.4 Spring Rate
Adjustment by Selective Connection of Accumulators -- 6.5 Tire-to-
Ground Force Optimization in All-Wheel Suspension Systems -- 7
Suspension Testing -- 7.1 Goals of Suspension Testing -- 7.1.1
Functional Testing -- 7.1.2 Durability Testing -- 7.2 Test Scenarios
and Methods.
7.3 Measurements, Evaluation and Optimization -- 7.3.1 Pressure --
7.3.2 Position/Displacement -- 7.3.3 Acceleration -- 7.3.4 Online
Versus Offline Evaluation -- 7.4 Typical Project Testing Steps -- 7.4.1
Initial Function Testing/Analysis -- 7.4.2 Hardware-In-The-Loop (HIL)
Testing -- 7.4.3 Laboratory Functional Testing -- 7.4.4 Machine
Functional Testing -- 7.4.5 Durability Testing -- 8 Design Examples --
8.1 Tractor Front Axle Suspension TLS by John Deere -- 8.2 Passenger
Car Axle Suspension by Citroen -- 8.3 Suspension Projects-Lessons
Learned -- 9 Important Patents -- 9.1 Improvement of Suspension
Characteristics -- 9.1.1 DE1755095 -- 9.1.2 DE19719076 -- 9.1.3
DE10107631 -- 9.1.4 DE10337600 -- 9.1.5 DE4221126 -- 9.1.6
DE4234217 -- 9.1.7 US9039021 -- 9.1.8 DE4223783 -- 9.1.9
US6167701 -- 9.1.10 DE19949152 -- 9.1.11 US6398227 -- 9.1.12
DE102008012704 -- 9.2 Roll Stabilization and Slope Compensation --
9.2.1 GB890089 -- 9.2.2 DE3427508 -- 9.2.3 DE10112082 -- 9.2.4
US4411447 -- 9.2.5 US6923453 -- 9.3 Suspension Lockout -- 9.3.1
US3953040 -- 9.3.2 DE4308460 -- 9.3.3 DE4032893 -- 10 Looking
into the Future -- 10.1 Components -- 10.2 Systems -- 10.3 Energy
Consumption -- 10.4 Trend Towards Electronics -- Index of Symbols
and Abbreviations -- Dimensions and Dimension Related Parameters
-- Forces and Force Related Parameters -- Accumulator Related
Parameters and Pressures -- Parameters Defining the Dynamic
Suspension Behavior -- Miscellaneous Parameters -- General Use
