

1. Record Nr.	UNINA9910523903803321
Titolo	Practical aspects of computational chemistry V // Jerzy Leszczynski, Manoj K. Shukla, editors
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2022] ©2022
ISBN	3-030-83244-9
Descrizione fisica	1 online resource (292 pages)
Disciplina	541.0285
Soggetti	Chemistry, Physical and theoretical - Data processing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- Contents -- 1 Introductory Roadmap to Current Reactive Force-Field Methodologies -- 1.1 Introduction -- 1.2 Bond Order Methodologies -- 1.3 Valence Bond Models -- 1.4 Parameterization -- 1.5 Other Reactive Methods -- 1.6 Conclusion -- References -- 2 Physics-Based Coarse-Grained Modeling in Bio-and Nanochemistry -- 2.1 Introduction -- 2.2 Designing Coarse-Grained Models and Force Fields -- 2.2.1 Potential of Mean Force as the Origin of CG Force Fields -- 2.2.2 Derivation of CG Force Fields from PMF Surfaces -- 2.2.3 Solvent Treatment in CG Force Fields -- 2.2.4 Force-Field Parameterization -- 2.2.4.1 Direct Computation of PMF Surfaces -- 2.2.4.2 Force Matching -- 2.2.4.3 Iterative Boltzmann Inversion and Inverse Monte Carlo Iteration -- 2.2.4.4 Fitting Force-Field Parameters to Reproduce the Experimental Data -- 2.2.4.5 Calibration with Experimental Structures -- 2.3 Methods of Conformational Search -- 2.3.1 Canonical Monte Carlo -- 2.3.2 Molecular Dynamics -- 2.3.3 Extensions of MC and MD -- 2.3.4 Global Energy Minimization -- 2.3.5 Use of Geometrical Restraints in CG Simulations -- 2.3.5.1 Chemical Cross-Link Mass-Spectroscopy and Fluorescence Energy Transfer -- 2.3.5.2 Small Angle X-ray/Neutron Scattering -- 2.3.5.3 Mutagenesis and Hydrogen-Deuterium Exchange (HDX) -- 2.3.5.4 Nuclear Magnetic Resonance -- 2.3.6 Contact-Distance and Template-Based Restraints -- 2.4 Examples of Physics-Based CG Force Fields and Their Applications -- 2.4.1 AWSEM -- 2.4.2 MARTINI -- 2.4.3 OPEP and

HiRe-RNA -- 2.4.4 oxDNA and oxRNA -- 2.4.5 SIRAH -- 2.4.6
 UNICORN -- 2.4.7 Structure-Based and Elastic-Network Potentials --
 2.5 Conclusions and Outlook -- References -- 3 First-Principles
 Modeling of Non-covalent Interactions in Molecular Systems and
 Extended Materials -- 3.1 Introduction -- 3.2 Theoretical Models of
 Non-covalent Interactions.
 3.2.1 Modeling van der Waals Interactions -- 3.2.2 Quantum Chemical
 Approaches for Non-covalent Interactions -- 3.2.3 Dispersion
 Computations in DFT -- 3.2.4 Dispersion Computation Through MP2
 and Higher Correlation Methods -- 3.3 Non-covalent Interactions in
 Hydrogen-Bonded (HB) Systems -- 3.3.1 Hydrogen Bonding and
 Related Properties of Small Water Clusters -- 3.3.2 Nature of O-H
 Stretching Modes -- 3.3.3 Effect of Halide Ion Interactions with Small
 Water Clusters -- 3.3.4 CTTS Properties of Halide-Water Clusters --
 3.3.5 Effect of Low-Frequency Vibrations of HBs in Fatty Acid Dimers
 and Their Amides -- 3.3.6 Empirical Additive Relations of EB for Fatty
 Acid and Amide Dimers -- 3.4 Molecular Modeling of Strong and Weak
 Cation- Interactions -- 3.5 Molecular Modeling of - Interactions --
 3.6 Modeling Non-covalent Interactions in Bio-inspired Supramolecular
 Systems -- 3.7 Conclusions -- References -- 4 DNA Damage
 Radiosensitizers Geared Towards HydratedElectrons -- 4.1 Introduction
 -- 4.2 Nucleoside Derivatives: A Trojan Horse Approach to
 Radiotherapy -- 4.2.1 Modified Nucleosides as Radiosensitizers --
 4.2.2 Nucleoside Derivatives as Trojan Horses -- 4.2.3 Electron-
 Induced Degradation of Modified Nucleosides: Experimental Studies --
 4.3 Computational Studies on Nucleoside Radiosensitizers -- 4.3.1 5-
 Bromo-2-Deoxyuridine -- 4.3.2 Crucial Characteristic of Electron
 Attachment Process -- 4.3.3 Bromonucleobases -- 4.3.4 5-Substituted
 Uracils as Potential Radiosensitizers -- 4.3.5 A Need to Expand the
 Computational Model for Difficult Derivatives -- 4.4 Oxygen Mimetics
 -- 4.5 Metallic Nanoparticles and Metal Complexes -- 4.5.1 Possible
 Mechanisms of Radiosensitization -- 4.5.2 On the Role of Low Energy
 Electrons in the Radiosensitization of DNA by Metallic Nanoparticles
 and Complexes -- 4.5.3 Not only Gold Nanoparticles and Cisplatin --
 4.6 Summary.
 References -- 5 Application of Computational Chemistry for
 Contaminant Adsorption on the Components of Soil Surfaces -- 5.1
 Introduction -- 5.2 Density Functional Theory (DFT) -- 5.2.1
 Preliminaries -- 5.2.2 Bloch Function -- 5.2.2.1 Bypassing Periodicity:
 Cluster Models -- 5.2.3 K-point Sampling -- 5.2.4 Density of States
 (DOS) and Analysis of Orbitals -- 5.2.5 Self-Interaction Errors -- 5.2.6
 The Problem of Electron Correlation -- 5.2.7 Forces, Hellmann-
 Feynman Theorem, and Geometry Optimization -- 5.3 Case Study:
 Adsorption of Munitions in Soils -- 5.3.1 Binding Energies -- 5.3.2
 Cluster Models and Electrochemical Properties -- 5.3.3 Comparison of
 Cluster and Periodic Surface Models -- 5.3.4 Lewis Acidity and
 Environmental Fate -- 5.3.5 Environmental Transport -- 5.4 Looking to
 the Future -- 5.4.1 Breathing New Life into an Old Method: Density
 Functional Tight Binding -- 5.4.2 Artificial Intelligence and Machine
 Learning (AI/ML) -- 5.4.2.1 Machine Learning and Energetics -- 5.4.2.2
 AI/ML and DFT -- 5.5 Conclusions -- References -- 6 Application of
 Computational Approaches to Analysis of Multistep Chemical Reactions
 of Energetic Materials: Hydrolysis of Hexahydro-1,3,5-Trinitro-1,3,5-
 Triazine (RDX) and Octahydro-1,3,5,7-Tetranitro-1,3,5,7-Tetrazocine
 (HMX) -- 6.1 Introduction -- 6.1.1 Short Survey of Experimental Data
 on RDX Hydrolysis -- 6.1.2 Short Survey of Experimental Data of HMX
 Hydrolysis -- 6.2 Computational Modeling of Hydrolysis of RDX --
 6.2.1 Conformational Analysis of RDX Structure -- 6.2.2 Mechanism of

RDX Alkaline Hydrolysis -- 6.2.3 Kinetics of RDX Alkaline Hydrolysis -- 6.2.4 Hydrolysis of HMX -- 6.2.4.1 Conformational Analysis of HMX Structure -- 6.2.4.2 Mechanism of HMX Alkaline Hydrolysis -- 6.2.4.3 Kinetics of HMX Alkaline Hydrolysis -- 6.2.5 Mechanism of 4-NDAB Decomposition Under Alkaline Conditions -- 6.3 Conclusion. References -- 7 Dataset Modelability by QSAR: Continuous Response Variable -- Abbreviations -- 7.1 Introduction -- 7.2 Methods -- 7.2.1 Datasets -- 7.2.1.1 Training Set Data -- 7.2.1.2 Test Set Data (14 Datasets) -- 7.2.2 Modelability Criteria -- 7.3 Results and Discussion -- 7.4 Conclusions -- References -- 8 A Cluster Model for Interpretation of Surface-Enhanced Raman Scattering of Organic Compounds Interacting with Silver Nanoparticles -- Abbreviations -- 8.1 Introduction -- 8.2 Surface-Enhanced Raman Scattering (SERS) Experiment -- 8.2.1 General Aspects -- 8.2.2 Electromagnetic Mechanism of SERS (EM) -- 8.2.3 Chemical Enhancement Mechanism (CE) -- 8.2.4 Use of Silver Nanoparticles in SERS Applications -- 8.3 Geometrical and Electronic Structures of Silver Clusters -- 8.4 Detection of Single Molecules Using SERS Technique -- 8.5 Concluding Remarks -- References -- Index.

2.	Record Nr.	UNISA996199904403316
	Titolo	Boletim de pesquisa florestal
	Pubbl/distr/stampa	Curitiba, Parana, : EMBRAPA, Unidade Regional de Pesquisa Forestal Centro-Sul
	Descrizione fisica	1 online resource
	Soggetti	Forests and forestry - Brazil Forests and forestry Periodicals. Brazil
	Lingua di pubblicazione	Portoghese
	Formato	Materiale a stampa
	Livello bibliografico	Periodico
