Sommario/riassunto	"Challenging the posthumanist canon which celebrates the pre-eminence of matter, Ruth Miller, in <i>Flourishing Thought</i> argues that what nonhuman systems contribute to democracy is thought. Drawing on recent feminist theories of nonhuman life and politics, Miller shows that reproduction and flourishing are not antithetical to contemplation and sensitivity. After demonstrating processes of life and processes of thought are indistinguishable, Miller finds that four menacing accumulations of matter and information--global surveillance, stored embryos, human clones, and reproductive trash--are politically productive rather than threats to democratic politics. As a consequence, she questions the usefulness of individual rights such as privacy and dignity, contests the value of the rational metaphysics underlying human-centered political participation, and re-evaluates the gender relations that derive from this type of participation. Ultimately, in place of these human-centered structures, Miller posits a more meditative mode of democratic engagement. Miller's argument has shattering implications for the debates over the proper use and disposal of embryonic tissue, alarms about data gathering by the state and corporations, and other major ethical, social, and security issues"

Sommario/riassunto

This book presents research on recent developments in collective decision-making. With contributions from leading scholars from a variety of disciplines, it provides an up-to-date overview of applications in social choice theory, welfare economics, and industrial organization. The contributions address, amongst others, topics such as measuring power, the manipulability of collective decisions, and experimental approaches. Applications range from analysis of the complicated institutional rules of the European Union to responsibility-based allocation of cartel damages or the design of webpage rankings. With its interdisciplinary focus, the book seeks to bridge the gap between different disciplinary approaches by pointing to open questions that can only be resolved through collaborative efforts.
