Edizione	[1st ed.]
Descrizione fisica	1 online resource (217 p.)
Collana	Culture and politics of health care work
Disciplina	362.1/0425
Soggetti	Health care reform - Great Britain Health care reform - United States Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Health care systems in the United States and the United Kingdom: a lifetime of change -- Turbulence in the two systems -- Measuring and rewarding performance: imposing change from above in the United Kingdom -- Regulating the frontline from above: the joint commission and hospital regulation in the United States -- Pushing back from the frontline: staff responses to privatization in the National Health Service -- Building a safety culture from the frontline in the United States -- From the health care workplace to the health care system: learning from the United States and United Kingdom.
Sommario/riassunto	There is constant pressure on hospitals to improve health care delivery and increase cost effectiveness. New initiatives are the order of the day in the dramatically different health care systems of the United States and Great Britain. Often, as we know all too well, these efforts are not successful. In The Challenge to Change, Rebecca Kolins Givan analyzes the successes and failures of efforts to improve hospitals and explains what factors make it likely that the implementation of reforms will be

rewarded by positive transformation in a particular institution's day-to-day operation. Givan's in-depth qualitative case studies of both top-down initiatives and changes first suggested by staff on the front lines of care point clearly to the importance of all hospital workers in effecting change and even influencing national policy. Givan illuminates the critical role of workers, managers, and unions in enabling or constraining changes in policies and procedures and ensuring their implementation. Givan spotlights an Anglo-American model of hospital care and work organization, even while these countries retain their differences in access and payment. Entrenched professional roles, hierarchical workplace organization, and the sometimes-detached view of policymakers all shape the prospects for change in hospitals. Givan provides important examples of how the dedication and imagination of the people who work in hospitals can make all the difference when it comes to providing quality health care even in a challenging economic environment.

Pubbl/distr/stampa	Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2021
Descrizione fisica	1 online resource (120 p.)
Soggetti	History of engineering and technology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Food is a source of nutrients but it also provides basic pleasure and aesthetic experiences. Acceptance, food choice, and consumption are affected by many factors, including both intrinsic and extrinsic factors and cues, as well as consumer characteristics. Food-elicited emotions

are becoming a critical component in designing products that meet consumers' needs and expectations. Several studies have reported on the presence of emotional responses to food and the relationships of these to product acceptability, preference, and choice. This Special Issue brings together a small range of studies with a diversity of approaches that provide good examples of the complex and multidisciplinary nature of this subject matter.
