Sommario/riassunto	Jarrod Hayes explores why democracies tend not to use military force against each other. He argues that democratic identity - the shared understanding within democracies of who 'we' are and what 'we' expect from each other - makes it difficult for political leaders to construct external democracies as threats. At the same time, he finds that democratic identity enables political actors to construct external non-democracies as threats. To explore his argument, he looks at US relations with two rising powers: India and China. Through his argument and case studies, Professor Hayes addresses not just the democratic peace but also the larger processes of threat construction in international security, the role of domestic institutions in international relations, and the possibility for conflict between the United States and the world's two most populous countries.

     Sommario/riassunto   As digital humanities has expanded in scope and content, questions of how to negotiate the overlapping influences of race, class, gender, sexuality, nation, and other dimensions that shape data, archives, and methodologies have come to the fore. Taking up these concerns, the authors in this volume explore their effects on the methodological, political, and ethical practices of digital humanities.
