Sommario/riassunto	Ce volume d'articles consacrés aux années vingt en Amérique, propose une approche multiforme des grandes crises et mutations du pays. Des analyses politiques, sociologiques et culturelles actualisent les

questions majeures que pose une période charnière entre grande guerre et crise de 29. Une équipe franco-américaine de spécialistes s'est attachée à fournir une synthèse d'informations, de témoignages et de jugements, fondée sur la recherche contemporaine. Des aspects parfois méconnus des « années folles », de « l'âge du jazz » et de la « génération perdue » sont abordés tels que la dimension ethnique, l'évolution des mentalités et le poids de la culture de masse.

#### Sommario/riassunto

This book, which consists of 11 chapters, highlights the major impact of invasive alien plants and animals on human health. This includes not only direct effects through contact with the species via bites, wounds and disease, but also indirect effects caused by changes induced in ecosystems by invasive species, such as more water hyacinth increasing mosquito levels and thereby the potential for malaria. The book covers a wide range of case studies from different taxa (animals and plants), and provides an overview of the diverse impacts of invasive species on health in developed and developing countries. It covers invasive (and poisonous) plants, marine species, scorpions, spiders and other arachnids, ticks and dust mites, insects (e.g. bugs, ants, wasps, and moths), mosquitoes and other diptera, freshwater species (invertebrates and fishes), amphibians and reptiles, birds and mammals. Also, climate change effects on alien species relevant to human health are discussed. The broad spectrum of the analysed case studies will ensure the appeal of the book to a wide public, including researchers of biological invasions, physicians, policy-makers and managers, and students of invasive species in ecology, animal and plant biology and public health medicine.
