Sommario/riassunto

This open access book presents new approaches for researching values as they are performed or materialized. Values have been an important topic in academic literature for a long time; they are at the core of institutional theories and are often connected to ideals in organisations or ways of valuing. The various values-constructs are typically highlighted to underpin discussions of identity, ethos, and the purposive institutional work of leaders and employees. However, there is a need for more research on how values link and sustain actions and institutions. Contributors in this volume map and discuss useful methodological ways in which values and values work can be investigated and how research on values has been and can be applied.
