

1.	Record Nr.	UNINA9910546696903321
	Autore	Scheijnen, Tine
	Titolo	Quintus of Smyrna's Posthomerica : a study of heroic characterization and heroism / by Tine Scheijnen
	Pubbl/distr/stampa	Leiden, : Brill, 2018
	ISBN	9789004373433
	Descrizione fisica	XV, 393 p. ; 24 cm
	Collana	Mnemosyne supplements , late antique literature ; 421
	Locazione	FLFBC
	Collocazione	P2F MNS LAL 421
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9911019520103321
	Autore	Kesidis George
	Titolo	An introduction to communication network analysis / / George Kesidis
	Pubbl/distr/stampa	Hoboken, N.J., : Wiley-Interscience, c2007
	ISBN	9786610935253 9781280935251 1280935251 9780470168684 0470168684 9780470168677 0470168676
	Descrizione fisica	1 online resource (248 p.)
	Disciplina	621.382/1
	Soggetti	Telecommunication - Traffic Network performance (Telecommunication) Switching theory
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa

Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 221-232).
Nota di contenuto	Preface -- 1. Review of Elementary Probability Theory -- 1.1 Sample space, events and probabilities -- 1.2 Random variables -- 1.3 Cumulative distribution functions, expectation and moment generating functions -- 1.4 Discretely distributed random variables -- 1.4.1 The Bernoulli distribution -- 1.4.2 The geometric distribution -- 1.4.3 The binomial distribution -- 1.4.4 The Poisson distribution -- 1.4.5 The discrete uniform distribution -- 1.5 Continuously distributed random variables -- 1.5.1 The continuous uniform distribution -- 1.5.2 The exponential distribution -- 1.5.3 The gamma distribution -- 1.5.4 The Gaussian (or normal) distribution -- 1.6 Some useful inequalities -- 1.7 Joint distribution functions -- 1.7.1 Joint PDF -- 1.7.2 Marginalizing a joint distribution -- 1.8 Conditional expectation -- 1.9 Independent random variables -- 1.9.1 Sums of independent random variables -- 1.10 Conditional independence -- 1.11 A law of large numbers -- 1.12 First order autoregressive estimators -- 1.13 Measures of separation between distributions -- 1.14 Statistical confidence -- 1.14.1 A central limit theorem -- 1.14.2 Confidence intervals -- 1.14.3 Recursive formulas and a stopping criterion -- 1.15 Deciding between two alternative claims -- Problems -- 2. Markov Chains -- 2.1 Memoryless property of the exponential distribution -- 2.2 Finite dimensional distributions and stationarity -- 2.3 The Poisson (counting) process on $\mathbb{R}^+$ -- 2.4 Continuous-time, time-homogeneous, Markov processes with countable state-space -- 2.4.1 The Markov property -- 2.4.2 Sample-path construction of a time-homogeneous, continuous-time Markov chain -- 2.4.3 The transition rate matrix and transition rate diagram -- 2.4.4 The Kolmogorov equations -- 2.4.5 The balance equations for the stationary distribution -- 2.4.6 Transience and recurrence -- 2.4.7 Convergence in distribution to steady-state -- 2.4.8 Time-reversibility and the detailed balance equation -- 2.5 Birth-death Markov chains -- 2.5.1 Birth-death processes with finite state-space -- 2.5.2 Birth-death processes with infinite state-space -- 2.5.3 Applications of forward equations -- 2.6 Modeling time-series data using a Markov chain -- 2.7 Simulating a Markov chain -- 2.8 Overview of discrete-time Markov chains -- 2.9 Martingales adapted to discrete-time Markov chains -- Problems -- 3. Introduction to Queueing Theory -- 3.1 Arrivals, departures and queue occupancy -- 3.2 Lossless queues -- 3.2.1 No waiting room -- 3.2.2 Single-server queue -- 3.2.3 Single-server and constant service times -- 3.2.4 Single-server and general service times -- 3.3 A queue described by an underlying Markov chain -- 3.4 Stationary queues -- 3.4.1 Point processes and queues on $\mathbb{R}$ -- 3.4.2 Stationary and synchronous versions of a marked point process -- 3.4.3 Poisson arrivals see time-averages -- 3.4.4 Little's result -- 3.5 Erlang's blocking formula for the M/M/K/K queue -- 3.6 Overview of discrete-time queues -- Problems -- 4. Local Multiplexing -- 4.1 Internet router architecture -- 4.1.1 Big picture of an IP (layer 3) router -- 4.1.2 Ingress linecard -- 4.1.3 Switch fabric -- 4.1.4 Egress linecard -- 4.2 Token (leaky) buckets for packet-traffic regulation -- 4.3 Multiplexing flows of variable-length packets -- 4.3.1 Multiplexing with a single FIFO queue -- 4.3.2 Strict priority -- 4.3.3 Deficit Round-Robin (DRR) -- 4.3.4 Shaped Virtual Clock (SVC) -- 4.4 Service curves -- 4.5 Connection multiplexing on a single trunk -- 4.6 A game-theoretic framework for multiplexing packet flows -- 4.7 Discussion: local medium access control of a single wireless channel -- Problems -- 5.

Queueing networks with static routing -- 5.1 Loss Networks -- 5.1.1
Fixed route arrival rates -- 5.1.2 Exact expression for connection
blocking -- 5.1.3 Fixed point iteration for approximate connection
blocking -- 5.2 Stable open networks of queues -- 5.2.1 Flow balance
equation
5.2.2 Open Jackson networks -- Problems -- 6. Dynamic Routing and
Routing with Incentives -- 6.1 General routing issues -- 6.1.1
Discussion: IP forwarding -- 6.1.2 Discussion: MPLS -- 6.2
Unconstrained optimization -- 6.3 Revenue maximization for loss
networks -- 6.4 Constrained optimization and duality -- 6.5 A
distributed pricing and resource management framework -- 6.6
Discussion: joint scheduling and routing in multihop wireless networks
-- 6.7 Multipath load balancing -- Problems -- 7. Peer-to-Peer File
Sharing with Incentives -- 7.1 Summary of query resolution -- 7.2
Unstructured query resolution -- 7.2.1 A centralized approach -- 7.2.2
A decentralized approach: limited-scope flooding and reverse-path
forwarding -- 7.2.3 A hybrid approach -- 7.2.4 An example of search
by random walk -- 7.3 Structured query resolution -- 7.3.1 A "Voronoi"
structured P2P framework -- 7.3.2 Specific Voronoi approaches --
7.3.3 Variations in the design of search, including Chord -- 7.3.4 The
Kademlia example -- 7.3.5 Spatial neighbor-to-neighbor graphs -- 7.4
Discussion: security issues -- 7.5 Incentives for cooperation when
downloading -- 7.5.1 Rule-based incentives of BitTorrent-like swarms
-- 7.5.2 Cumulative reputations -- 7.5.3 Trust groups for scalability
and reliability -- 7.5.4 Discussion: P2P games -- Problems --
References -- Appendix A: Additional Background on Routing -- A.1
Network graph terminology -- A.2 Link-state algorithms -- A.3 The
Bellman-Ford approach -- Appendix B: Solutions or References for
Selected Problems -- Reference

Sommario/riassunto

This book is a quantitative text, which focuses on the real issues behind serious modeling and analysis of communications networks. The author covers all the necessary mathematics and theory in order for students to understand the tools that optimize computer networks today. . Covers both classical (e.g. queueing theory) and modern (e.g. pricing) aspects of networking. Integrates material on communication networks with material on modeling/analyzing and designing such networks. Includes a Solution Manual
