

1.	Record Nr.	UNIORUON00343492
	Autore	DIGGELMANN, Walter Matthias
	Titolo	Das Verhör des Harry Wind : Roman / Walter Matthias Diggelmann ; mit einem Nachwort von Stefan Howald
	Pubbl/distr/stampa	Zürich, : Buchclub Ex Libris, 1988
	Descrizione fisica	265 p. ; 19 cm.
	Disciplina	833.91
	Lingua di pubblicazione	Tedesco
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910484015703321
	Autore	Borelli Giovanni Alfonso
	Titolo	Borelli's On the Movement of Animals - On the Force of Percussion // by Giovanni Alfonso Borelli
	Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2015
	ISBN	3-319-08497-6
	Edizione	[1st ed. 2015.]
	Descrizione fisica	1 online resource (245 p.)
	Collana	Studies in History and Philosophy of Science, , 0929-6425 ; ; 37
	Disciplina	531.11
	Soggetti	History Medicine—History History of Science History of Medicine
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references at the end of each chapters.
	Nota di contenuto	Foreword of the Author.- Chapter I On the nature of movement in general.- Chapter II On the causes and principles of movement. - Chapter III Projectiles after being separated from their impeller are

not moved forwards by the fluid environment in which they are. Chapter IV Projectiles are moved forwards by a virtue impressed by the throwing subject, after they are separated from the latter.- Chapter V On the properties and actions of the motive virtue.- Chapter VI How the impetus of the throwing subject is distributed and transmitted in the projectiles and why it is decreased.- Chapter VII The velocity which is transmitted by the blow to the projected body, by its nature, is distributed, not over a certain time, but in an instant.- Chapter VIII The velocity transmitted in elastic and not absolutely hard bodies by a striking blow is not impressed in one instant but in several successive instants of the time.- Chapter IX The velocity impressed in a projectile is uniform by its nature and perpetually durable.- Chapter X On the proportion of percussions carried out in a body absolutely stable or movable.- Chapter XI On the variety of percussions, which originates from the movement and the position of the bodies receiving the blow -- Chapter XII On the percussion of bodies colliding obliquely on a stable plane.- Chapter XIII On the percussion of bodies colliding in oblique movements.- Chapter XIV On the variety of percussions carried out by the impetus of a curved and accelerated movement.- Chapter XV On the rebound which follows the percussion of bodies.- Chapter XVI How the impetus is weakened and extinguished in projectiles.- Chapter XVII The impetus impressed in any body can be weakened and diminished instantaneously because of its diffusion but it can be completely deleted and annihilated only over some time, although we can suspect that movement is responsible neither of its beginning nor of its end.- Chapter XVIII How an impetus impressed in elastic bodies is slowed down and extinguished.- Chapter XIX Why opposite movements annihilate each other and renew themselves in elastic and resilient bodies.- Chapter XX On the flow of impetus and on its magnitude. - Chapter XXI Moving bodies are urged at an uniform velocity never to be annihilated -- Chapter XXII How can an accelerated movement be generated.- Chapter XXIII On the natural motive faculty of gravity. - Chapter XXIV The force of the impetus of falling heavy bodies is smaller than any impulsive force impressed by a projectile.- Chapter XXV Digression on the reason why a magnet attracts iron.- Chapter XXVI All solid bodies are not absolutely hard but they are either fluent or soft or elastic.- Chapter XXVII On the comparison between the energy of percussion and the compressive force of gravity.- Chapter XXVIII Explanation of the problem and enquiry on the actual causes of this wonderful effect.- Chapter XXIX The energy of percussion is greater than the compressive force of any finite heavy body.- Chapter XXX On shaking of bodies -- Chapter XXXI More accurate investigation of the cause of vibration.- Chapter XXXII The smallest motive force of any body, by a slow movement, can impress and increase in a huge body a velocity greater than that at which the impeller moved.- Chapter XXXIII The impetus of a percussion cannot be measured by the simple energy of gravity.- Chapter XXXIV Examination of the question 19 in the Mechanics of Aristotle.- Answer to some considerations and objections of R.P.F. Stephano Degli Angeli, concerning his book On the force of Percussion.- Answer to Sir Michelo Angelo Ricci.

---

## Sommario/riassunto

This volume provides an introduction to Borelli's theory on the movement of animals and demonstrates the nature of the energy of percussion, its causes, properties and effects. Building on and moving away from the theory of mechanics as formulated by Aristotle and Galileo, and countering objections expressed by Stephani degli Angeli among others, Borelli presents a completely mechanical account of the action of muscles, and analyzes the way in which the center of gravity of the animal shifts in locomotion. Originally published in Italian in

1667, then translated into Latin in 1686, the text of this volume has now been translated into English, making the text accessible to a wide readership. This volume is the first of two volumes that contain the Introduction and physical-mathematical illustrations necessary to understand Giovanni Alfonso Borelli's work *On the Movement of Animals*, the founding text of seventeenth century biomechanics. The second volume, entitled *On The Natural Motions Resulting From Gravity*, describes his theory and scientific experiments relating to the natural movements of bodies in a fluid environment.

3. Record Nr.	UNINA9910551833903321
Titolo	Environmental Restoration : Proceedings of F-EIR Conference 2021 / / edited by Deepankar Kumar Ashish, Jorge de Brito
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2022
ISBN	3-030-96202-4
Edizione	[1st ed. 2022.]
Descrizione fisica	1 online resource (302 pages)
Collana	Lecture Notes in Civil Engineering, , 2366-2565 ; ; 232
Disciplina	628 333.7153
Soggetti	Environmental engineering Biotechnology Bioremediation Environmental monitoring Sustainable architecture Environmental Engineering/Biotechnology Environmental Monitoring Sustainable Architecture/Green Buildings
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Chapter 1: Review on Bacteria Based Cementitious Matrix for Sustainable Building Construction -- Chapter 2: Physical and Mechanical Properties of Concrete Made With Glass Sand -- Chapter 3:

A study on the utilization of waste powders in civil engineering with particular attention to Poland -- Chapter 4: Comparative Study on Fly Ash Based AAM Concrete with GGBS, Rice Husk Ash and Sugarcane Bagasse Ash -- Chapter 5: Self-Consolidating Concrete Produced With Fine CDW -- Chapter 6: Fine Aggregates of CDW: Feasibility of Its Application in the Manufacture of Mortars for Laying -- Chapter 7: Evaluation of Barrier for Promoting Green Building Technologies in Coimbatore as Smart City -- Chapter 8: Cement After Expiry Date: Effect in the Concrete Properties -- Chapter 9: Problems and Prospects of Heritage Based City Development in India.

#### Sommario/riassunto

This book gathers peer-reviewed contributions presented at the F-EIR Conference 2021, Environment Concerns and its Remediation, held in Chandigarh, India, on October 18-22, 2021. The respective papers focus on environmental monitoring and remediation, and cover topics such as efficiency in the use of energy, water, resources and human capital, waste minimization & management, durability and sustainability of building materials, green technologies, environmental sustainability and resilience, renewable energy, prevention and management of water pollution, life cycle assessment, and climate change. Accordingly, the book offers a valuable, up-to-date tool and essential overview of the subject for scientists and practitioners alike, and will inspire further investigations and research. .
