

1. Record Nr.	UNINA9910552754103321
Autore	Campbell Robert W (Robert Wellington), <1926-2015.>
Titolo	Soviet Energy Technologies : Planning, Policy, Research, and Development // Robert W. Campbell
Pubbl/distr/stampa	Indiana University Press, 1980 1980., : Indiana University Press Bloomington
Descrizione fisica	1 online resource (x, 268 p.) : graphs ;
Disciplina	333.79/0947
Soggetti	Power resources - Research - Soviet Union Energy policy - Soviet Union Energy development - Soviet Union
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di bibliografia	Bibliography: p. 251-260.
Sommario/riassunto	Robert W. Campbell's informed study of Soviet technological capabilities and efforts to innovate in the energy field provides a basis for understanding Soviet energy problems and forecasting future Soviet energy problems and forecasting future Soviet choices among energy options. Drawing on a large body of Soviet source material—publications of research and development organizations, engineering sources, technical journals, and economic publications—the author, a leading expert in Soviet energy matters, gives us a clear picture of the development of Soviet technologies both for producing energy and for exploiting new sources of fuel.
