

1. Record Nr.	UNINA9910552991303321
Titolo	Building with Nature perspectives : Cross-disciplinary BwN approaches in coastal regions // edited by Janneke van Bergen [and three others]
Pubbl/distr/stampa	Delft : , : TU Delft Open, , 2021
Descrizione fisica	1 online resource (296 pages) : illustrations
Disciplina	307.3
Soggetti	Urban renewal
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	<p>This publication offers an overview of the latest cross-disciplinary developments in the field of Building with Nature (BwN) for the protection of coastal regions. The key philosophy of BwN is the employment of natural processes to serve societal goals, such as flood safety. The starting point is a systems-based approach, making interventions that employ the shaping forces of the natural system to perform measures by self-regulation. Initial pilots of this innovative approach originate from coastal engineering, with the Sand Motor along the coast of South Holland as one of the prime examples. From here, the BwN approach has evolved into a new generation of nature-based hydraulic solutions, such as mangrove forests, coastal reefs, and green dikes.</p>
