

1. Record Nr.	UNINA9910554219503321
Autore	Gosson Maurice de
Titolo	Quantum harmonic analysis : an introduction // Maurice A. de Gosson
Pubbl/distr/stampa	Boston, Massachusetts : , : De Gruyter, , [2021] ©2021
ISBN	3-11-072277-1 9783110722772 3110722771
Descrizione fisica	1 online resource (xviii, 222 pages)
Collana	Advances in analysis and geometry ; ; volume 4
Disciplina	530.12
Soggetti	Quantum theory Harmonic analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Frontmatter -- Contents -- Preface -- Introduction -- 1 Preliminaries -- 2 Displacements and reflections -- 3 The cross-Wigner transform -- 4 Gaussians and hermite functions -- 5 The Weyl transform -- 6 The Cohen class -- 7 Born–Jordan quantization -- 8 Metaplectic operators -- 9 The property of symplectic covariance -- 10 The Feichtinger algebra -- 11 Hilbert–Schmidt operators -- 12 The trace class -- 13 The quantum Bochner theorem -- 14 The density operator -- 15 The uncertainty principle -- 16 Separability and entanglement -- 17 Separability of Gaussian states -- Bibliography -- Index
Sommario/riassunto	Quantum mechanics is arguably one of the most successful scientific theories ever and its applications to chemistry, optics, and information theory are innumerable. This book provides the reader with a rigorous treatment of the main mathematical tools from harmonic analysis which play an essential role in the modern formulation of quantum mechanics. This allows us at the same time to suggest some new ideas and methods, with a special focus on topics such as the Wigner phase space formalism and its applications to the theory of the density operator and its entanglement properties. This book can be used with profit by advanced undergraduate students in mathematics and physics, as well as by confirmed researchers.
