“Knowledge Economy” and the Competence-based Approach to their Development -- 11 Development of Professional and Creative Competencies of Students through Independent Cognitive Activity -- 12 Development of Students’ Creative Competence in the Educational Process using Didactical Games -- 13 Current Problems of Quality Assurance for the Formation of General Professional Competences of Future Teachers of History -- 14 Formation of Social and Pedagogical Competence of Future Teachers in the Process of Preparing them for Pedagogical Activity -- Part IV: The Institutional Basis of Corporate Management for Rapid Economic Development -- 15 Strategy for the Functioning of Logistics Companies in Uzbekistan -- 16 Modern Technologies for Increasing Transparency and Analyzing Business Entity Reporting in the Context of Economic Theory Paradigms of Business Social Responsibility -- 17 A Set of Systemic Measures for the Development of International Cooperation and Integration of Small and Medium- Sized Businesses in Russia -- 18 Accounting – a System for Managing Economic Information in Agriculture -- Conclusion: Future Challenges Related to Socio-Economic Development and the Institutional Response to them -- List of Figures -- List of Tables -- Index

Sommario/riassunto

The strategies and practical approaches for socio-economic development are undergoing systemic changes under the influence of new developments in global economic systems and markets. The most significant factors influencing such changes are connected to the start of the Fourth Industrial Revolution (Industry 4.0), which is impacting all economic systems to a greater or lesser extent. The creation of the digital economy and transition to Industry 4.0 particularly increases the significance of hi-tech for socio-economic development. Secondly, there is now a transition underway from a period of unlimited globalization and comprehensive integration to more limited globalization and selective economic integration. The growing importance of regionalization on the global economic system is manifested in the formation and rapid development of new integration unions at the regional or country level (e.g., the EU and the EAEU), and company level (e.g., regional sectoral economic clusters, special economic areas, technological parks, and innovative networks). Thirdly, there’s an urgent need for faster innovation, which leads to the formation of more innovative economies. The global financial crisis drew attention to the problems of managing sustainability and achieving balance in socio-economic development. The formation and exponential growth of the information society, based on digital technologies, is now stimulating the growth and significance of corporate social and environmental responsibility as a prerequisite for entrepreneurial success. Thus, the paradigm of socio-economic development is changing from absolute rationality (economic effectiveness) and stability – which has historically been associated with problems of stagnation – to responsibility (limited and socially-oriented rationality) and dynamism (quick innovative development based on leading technologies). This book aims to provide a scientific substantiation for this new paradigm.
