

1. Record Nr.	UNINA9910554254303321
Autore	Garrett Brandon
Titolo	Autopsy of a crime lab : exposing the flaws in forensics // Brandon L. Garrett
Pubbl/distr/stampa	Oakland, California : , : University of California Press, , [2021] Â©2021
ISBN	0-520-97663-0
Descrizione fisica	1 online resource (252 pages) : illustrations
Disciplina	345.064
Soggetti	DNA fingerprinting - Law and legislation Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Frontmatter -- Contents -- Part I The Crisis in Forensics -- Introduction -- 1 The Bite Mark Case -- 2 The Crisis in Forensics -- Part II Flawed Forensics -- 3 False ID -- 4 Error Rates -- 5 Overstatement -- 6 Qualifications -- 7 Hidden Bias -- 8 The Gatekeepers -- Part III Failed Labs -- 9 Failed Quality Control -- 10 Crime Scene Contamination -- Part IV The Movement to Fix Forensics -- 11 The Rebirth of the Lab -- 12 Big Data Forensics -- 13 Fixing Forensics -- Acknowledgments -- Appendix Suggested Resources -- Notes -- Index
Sommario/riassunto	This book exposes the dangerously imperfect forensic evidence that we rely on for criminal convictions.";That's not my fingerprint, your honor,"; said the defendant, after FBI experts reported a ";100-percent identification."; They were wrong. It is shocking how often they are. Autopsy of a Crime Lab is the first book to catalog the sources of error and the faulty science behind a range of well-known forensic evidence, from fingerprints and firearms to forensic algorithms. In this devastating forensic takedown, noted legal expert Brandon L. Garrett poses the questions that should be asked in courtrooms every day: Where are the studies that validate the basic premises of widely accepted techniques such as fingerprinting? How can experts testify with 100 percent certainty about a fingerprint, when there is no such

thing as a 100 percent match? Where is the quality control in the laboratories and at the crime scenes? Should we so readily adopt powerful new technologies like facial recognition software and rapid DNA machines? And why have judges been so reluctant to consider the weaknesses of so many long-accepted methods? Taking us into the lives of the wrongfully convicted or nearly convicted, into crime labs rocked by scandal, and onto the front lines of promising reform efforts driven by professionals and researchers alike, *Autopsy of a Crime Lab* illustrates the persistence and perniciousness of shaky science and its well-meaning practitioners.
