

1. Record Nr.	UNINA9910554880803321
Titolo	Molecular breeding for rice abiotic stress tolerance and nutritional quality // edited by Mohammad Anwar Hossain
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley Blackwell, , [2021] ©2021
ISBN	1-119-63316-8 1-119-63317-6 1-119-63315-X
Descrizione fisica	1 online resource (467 pages)
Disciplina	633.18
Soggetti	Rice - Effect of stress on - Genetic aspects Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Editor Biographies -- Preface -- List of Contributors -- Chapter 1 Rice Adaptation to Climate Change: Opportunities and Priorities in Molecular Breeding -- Introduction -- Rice Production Scenario and Climate Change -- Prospects of Molecular Breeding for ClimateResilient Rice -- Molecular Breeding in Rice -- Breeding for Abiotic Stress Tolerance -- Drought -- Salinity -- Submergence -- High Temperature -- Low Temperature -- Breeding for Biotic Stress Tolerance -- Diseases -- Pests -- Weed Competitiveness -- Conclusion -- References -- Chapter 2 Molecular Breeding for Improving Salinity Tolerance in Rice: Recent Progress and Future Prospects -- Introduction -- Salt Tolerance Mechanisms -- RootLevel Ion Exclusion -- PlantLevel Compartmentation -- CellLevel Compartmentation -- Natural Variability for Salt Tolerance in Rice Germplasm -- Conventional Tools to Improve Salinity Tolerance -- Conventional Breeding -- Mutation Breeding -- Tissue Culture -- Molecular Tools to Improve Salinity Tolerance -- QTL Mapping -- MarkerAssisted Selection -- Candidate Genes and Allele Mining -- Genetic Engineering to Improve Salt Tolerance -- Novel Tools to Aid in Molecular Breeding -- MultiParental Advanced Generation Intercross

Strategy -- Genomic Selection -- Phenomics -- NextGeneration Sequencing -- Genome Editing -- Conclusion and Future prospects -- Acknowledgments -- References -- Chapter 3 Molecular Breeding for Improving Drought Tolerance in Rice: Recent Progress and Future Perspectives -- Introduction -- The Drought Challenges and Its Distribution -- Climate Change and Drought -- Drought Impacts on the Rice Plant -- Drought Phenotyping Platforms -- Drought Screening Protocols -- FieldBased Phenotyping -- Design and Management of Field Drought Experiments -- TraitBased Selection for Drought Resistance.

Direct Selection for Yield Under Stress -- Molecular Markers and Genotyping Strategies -- GenomeWide Scans with Microsatellite Markers (Simple Sequence Repeats, SSRs) -- SNP (Single Nucleotide Polymorphism) Genotyping -- TraitSpecific SNPs Used as Diagnostic Markers -- Genetic Basis of Drought Tolerance in Rice -- Mapping and Deployment of Drought QTLs -- Fine Mapping of Identified Genetic Regions -- Development of NILs and PLs Carrying Drought QTLs in Background of High Yielding Rice Varieties -- MAS Introgression of Multiple Traits -- Understanding the Molecular Basis of Complexities of Epistatic Interactions -- Modern Breeding Strategies and Programs for Accelerated Genetic Gain -- Rapid Breeding Cycles -- Novel Breeding Strategies Using GS -- Deployment of Genome Editing, Especially the CRISPR Technologies -- Conclusion -- References -- Chapter 4

Molecular Breeding for Improving Flooding Tolerance in Rice: Recent Progress and Future Perspectives -- Introduction -- Rice Tolerant to Germination Stage Oxygen Deficiency and Submergence and Stagnant Flooding? -- History of Flooding Tolerance and Molecular Breeding -- Convergence of Conventional and Molecular Breeding -- Conclusion and Future Perspective -- Acknowledgment -- References -- Chapter 5 Molecular Breeding for Improving Heat Stress Tolerance in Rice: Recent Progress and Future Perspectives -- Introduction -- Climate Change and Heat Tolerance Genotype Needs -- Recent Progress on Rice Breeding -- Plant Physiology on HeatStress Response -- Net Photosynthesis Rate -- Grain Filling -- Response in Germination -- Response in Anthesis -- Amylose Content Response to Heat -- Heat Induced Quality Decline of Rice (WhiteBack Kernel) -- Source Sink Dynamics -- Genetic Background -- Breeding Materials (Donors) -- Genetic Diversity Analysis -- Phenotyping -- Putative and Candidate Genes/QTLs.

MarkerAssisted Selection (Microsatellites and SNP Arrays) -- Proteomics -- Future Perspectives -- Conclusions -- References -- Chapter 6 Molecular Breeding for Improving Cold Tolerance in Rice: Recent Progress and Future Perspectives -- Introduction -- Preliminary Mapping of ColdTolerant QTLs and Fine Mapping of Major Loci -- Map Based Cloning and Molecular Mechanism of ColdResistant QTLs -- Molecular Regulatory Networks for Cold Tolerance in *Oryza sativa* -- CBF Regulatory Pathway -- MYB Regulatory Pathway -- Outlook -- References -- Chapter 7 Molecular Breeding for Lower Cadmium Accumulation in Rice Grain: Progress and Perspectives -- Introduction -- Cd Toxicity to Human Health -- The Origin of Cd Contamination in Soils -- Cd Accumulation in Rice -- Cd Uptake and Distribution Patterns During the Whole Growth Cycle of Rice -- The Diversity of Cd Accumulation Trait in Different Varieties of Rice -- Genetic Basis for Cd Accumulation in Rice -- Influence of Environmental Factors on Cd Accumulation in Rice -- Influence of Soil Water on Rice Cd Accumulation -- Influence of pH Values in Soil and Irrigation Water on Rice Cd Accumulation -- Effect of the Application of Other Ions or Chemical Compounds on Rice Cd Accumulation -- Influence of

Rhizosphere Microorganisms on Rice Cd Accumulation -- Influence of Genetic Factors on Cd Accumulation in Rice -- Transporters for Cd Uptake and Translocation -- Genes Involved in Cd Chelation -- Regulating Genes to Mediate Grain Cd Accumulation in Rice -- Molecular Breeding for LowCd Accumulation in Rice Grains -- Screening and Identification of LowCd Varieties -- Molecular Marker Assisted LowCd Gene Aggregation Breeding -- Gene EditingBased Molecular Breeding -- Conclusions and Perspectives -- Acknowledgments -- References.

Chapter 8 Molecular Breeding for Improving Arsenic Stress Tolerance in Rice: Recent Progress and Future Perspectives -- Introduction -- Tolerance to Arsenic in Rice -- The Phytotoxic Effects of Arsenic and the Rice Defense Response -- Genetic Diversity for Arsenic Tolerance -- Genetic Bases of Arsenic Tolerance -- Molecular Breeding Options for Rice Tolerance to Arsenic -- MarkerAssisted Recurrent Selection -- Genomic Selection -- Genomic Selection for Arsenic Tolerance in Rice: A Case Study -- Methods -- Genomic Prediction Results -- Cross Validation Within the Reference Population -- Genomic Prediction Across Populations -- Implication for Breeding for Arsenic Tolerance -- Future Prospects -- References -- Chapter 9 Molecular Breeding for Improving Ozone Tolerance in Rice: Recent Progress and Future Perspectives -- Introduction -- Tropospheric Ozone: A Major Threat to Rice Production in Asia -- Mechanisms of Ozone Damage -- Ozone Tolerance Mechanisms -- OzoneImpact Assessments -- Molecular Breeding Strategies for Improved Ozone Tolerance -- Breeding Progress and Future Perspectives of Ozone Tolerance in Rice -- Conclusion -- References -- Chapter 10 Molecular Breeding Strategies for Enhancing Rice Yields Under Low Light Intensity -- Introduction -- Effect of Low Light in Rice Physiology, Development and Yield -- Candidate Genes and Pathways Imparting Tolerance -- Low Light Perception -- Molecular Targets for Erect Lamina -- Molecular Basis of Delayed Senescence -- Cross Talk Between Various Stresses -- "Omics" and Mapping Studies -- Future Prospects and Molecular Breeding Strategy -- References -- Chapter 11 Harnessing Tolerance to Low Phosphorus in Rice: Recent Progress and Future Perspectives -- Introduction -- Phosphorus Uptake and Assimilation in Plants -- Role of Low P in Rice Development and Growth -- Uptake and Transport of P in Rice.

Signaling in Response to Low Pi -- Assimilation of P in Rice -- Vegetative Stage -- Reproductive Stage -- Impact of P Deficiency on Rice -- Resources That Have Helped Enhance the Understanding of Low P Tolerance in Rice -- QTLs -- Functionally Validated Low P Tolerance Potential Candidates -- Molecular Targets Available in Rice for Breeding -- PUP1 History and Deployment of PUP1 Based Markers for MAS -- Other Haplotypes Reported for PUP1 and Implications for Breeding Program -- Beyond PSTOL1 -- Future Prospects -- Acknowledgments -- References -- Chapter 12 Molecular Breeding for Improving Nitrogen Use Efficiency in Rice: Progress and Perspectives -- Introduction -- Evaluation of Genetic Variation for Nitrogen Use Efficiency -- Identification of QTL and Genomic Regions through Biparental and Association Mapping -- QTL -- Association Mapping -- Expression Analyses of Candidate Genes Associated with Nitrogen Metabolism -- Ways to Go for the Development of Rice Varieties -- Conclusions -- References -- Chapter 13 Dissecting the Molecular Basis of DroughtInduced Oxidative Stress Tolerance in Rice -- Introduction -- Effect of Drought Stress in Rice -- Sources of ROS Production during Drought Stress in Rice Plants -- Antioxidative Defenses and Redox Homeostatic Mechanisms in Rice in Response to

Drought -- ROS Signaling under Drought Stress -- HighThroughput Technologies to Identify DroughtInduced Oxidative StressTolerance Mechanisms -- Genome Editing Using CRISPRCas9 Technology -- Expressed Sequence Tags (ESTs) -- Gene Networks -- RNASeq Technology -- MicroRNA (miRNA) Technology -- VirusInduced Gene Silencing Machinery -- TILLING (Targeting Induced Local Lesions in Genomes) -- Identification of Superior Alleles or QTLs Associated with Drought Tolerance -- Molecular Mechanism in Tolerant Genotype in Comparison to Sensitive Genotype under Drought.
Conclusion and Future Perspectives.
