

1. Record Nr.	UNINA9910555132003321
Autore	Free Charles E.
Titolo	RF and microwave circuit design : theory and applications / / Charles E. Free, Colin S. Aitchison
Pubbl/distr/stampa	Hoboken, New Jersey : , : John Wiley & Sons, Inc., , [2022] ©2022
ISBN	1-119-11467-5 1-119-11466-7 1-119-33223-0
Descrizione fisica	1 online resource (531 pages)
Collana	Microwave and Wireless Technologies Series
Disciplina	621.38412
Soggetti	Radio circuits - Design and construction Microwave circuits - Design and construction
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Preface -- About the Companion Website -- Chapter 1 RF Transmission Lines -- 1.1 Introduction -- 1.2 Voltage, Current, and Impedance Relationships on a Transmission Line -- 1.3 Propagation Constant -- 1.3.1 Dispersion -- 1.3.2 Amplitude Distortion -- 1.4 Lossless Transmission Lines -- 1.5 Matched and Mismatched Transmission Lines -- 1.6 Waves on a Transmission Line -- 1.7 The Smith Chart -- 1.7.1 Derivation of the Smith Chart -- 1.7.2 Properties of the Smith Chart -- 1.8 Stubs -- 1.9 Distributed Matching Circuits -- 1.10 Manipulation of Lumped Impedances Using the Smith Chart -- 1.11 Lumped Impedance Matching -- 1.11.1 Matching a Complex Load Impedance to a Real Source Impedance -- 1.11.2 Matching a Complex Load Impedance to a Complex Source Impedance -- 1.12 Equivalent Lumped Circuit of a Lossless Transmission Line -- 1.13 Supplementary Problems -- Appendix 1.A Coaxial Cable -- 1.A.1 Electromagnetic Field Patterns in Coaxial Cable -- 1.A.2 Essential Properties of Coaxial Cables -- Appendix 1.B Coplanar Waveguide -- 1.B.1 Structure of Coplanar Waveguide (CPW) -- 1.B.2 Electromagnetic Field Distribution on a CPW Line -- 1.B.3 Essential Properties of Coplanar (CPW) Lines -- 1.B.4

Summary of Key Points Relating to CPW Lines -- Appendix 1.C Metal Waveguide -- 1.C.1 Waveguide Principles -- 1.C.2 Waveguide Propagation -- 1.C.3 Rectangular Waveguide Modes -- 1.C.4 The Waveguide Equation -- 1.C.5 Phase and Group Velocities -- 1.C.6 Field Theory Analysis of Rectangular Waveguides -- 1.C.7 Waveguide Impedance -- 1.C.8 HigherOrder Rectangular Waveguide Modes -- 1.C.9 Waveguide Attenuation -- 1.C.10 Sizes of Rectangular Waveguide and Waveguide Designation -- 1.C.11 Circular Waveguide -- References -- Chapter 2 Planar Circuit Design I -- 2.1 Introduction. 2.2 Electromagnetic Field Distribution Across a Microstrip Line -- 2.3 Effective Relative Permittivity, ϵ_{eff} MSTRIP -- 2.4 Microstrip Design Graphs and CAD Software -- 2.5 Operating Frequency Limitations -- 2.6 Skin Depth -- 2.7 Examples of Microstrip Components -- 2.7.1 BranchLine Coupler -- 2.7.2 QuarterWave Transformer -- 2.7.3 Wilkinson Power Divider -- 2.8 Microstrip CoupledLine Structures -- 2.8.1 Analysis of Microstrip Coupled Lines -- 2.8.2 Microstrip Directional Couplers -- 2.8.2.1 Design of Microstrip Directional Couplers -- 2.8.2.2 Directivity of Microstrip Directional Couplers -- 2.8.2.3 Improvements to Microstrip Directional Couplers -- 2.8.3 Examples of Other Common Microstrip CoupledLine Structures -- 2.8.3.1 Microstrip DC Break -- 2.8.3.2 EdgeCoupled Microstrip Band Pass Filter -- 2.8.3.3 Lange Coupler -- 2.9 Summary -- 2.10 Supplementary Problems -- References -- Chapter 3 Fabrication Processes for RF and Microwave Circuits -- 3.1 Introduction -- 3.2 Review of Essential Material Parameters -- 3.2.1 Dielectrics -- 3.2.2 Conductors -- 3.3 Requirements for RF Circuit Materials -- 3.4 Fabrication of Planar HighFrequency Circuits -- 3.4.1 Etched Circuits -- 3.4.2 ThickFilm Circuits (Direct Screen Printed) -- 3.4.3 Thick Film Circuits (Using Photoimageable Materials) -- 3.4.4 LowTemperature CoFired Ceramic Circuits -- 3.5 Use of Ink Jet Technology -- 3.6 Characterization of Materials for RF and Microwave Circuits -- 3.6.1 Measurement of Dielectric Loss and Dielectric Constant -- 3.6.1.1 Cavity Resonators -- 3.6.1.2 Dielectric Characterization by Cavity Perturbation -- 3.6.1.3 Use of the Split Post Dielectric Resonator (SPDR) -- 3.6.1.4 Open Resonator -- 3.6.1.5 FreeSpace Transmission Measurements -- 3.6.2 Measurement of Planar Line Properties -- 3.6.2.1 The Microstrip Resonant Ring -- 3.6.2.2 Nonresonant Lines. 3.6.3 Physical Properties of Microstrip Lines -- 3.7 Supplementary Problems -- References -- Chapter 4 Planar Circuit Design II -- 4.1 Introduction -- 4.2 Discontinuities in Microstrip -- 4.2.1 OpenEnd Effect -- 4.2.2 StepWidth -- 4.2.3 Corners -- 4.2.4 Gaps -- 4.2.5 T Junctions -- 4.3 Microstrip Enclosures -- 4.4 Packaged Lumped Element Passive Components -- 4.4.1 Typical Packages for RF Passive Components -- 4.4.2 LumpedElement Resistors -- 4.4.3 Lumped Element Capacitors -- 4.4.4 LumpedElement Inductors -- 4.5 Miniature Planar Components -- 4.5.1 Spiral Inductors -- 4.5.2 Loop Inductors -- 4.5.3 Interdigitated Capacitors -- 4.5.4 Metal-Insulator-Metal Capacitor -- References -- Chapter 5 SParameters -- 5.1 Introduction -- 5.2 SParameter Definitions -- 5.3 Signal Flow Graphs -- 5.4 Mason's Nontouching Loop Rule -- 5.5 Reflection Coefficient of a TwoPort Network -- 5.6 Power Gains of TwoPort Networks -- 5.7 Stability -- 5.8 Supplementary Problems -- {5.A.1} Transmission Parameters (ABCD Parameters) -- {5.A.2} Admittance Parameters (Y Parameters) -- {5.A.3} Impedance Parameters (ZParameters) -- References -- Chapter 6 Microwave Ferrites -- 6.1 Introduction -- 6.2 Basic Properties of Ferrite Materials -- 6.2.1 Ferrite Materials -- 6.2.2 Precession in Ferrite Materials -- 6.2.3 Permeability Tensor -- 6.2.4 Faraday Rotation -- 6.3 Ferrites in Metallic Waveguide -- 6.3.1

Resonance Isolator -- 6.3.2 Field Displacement Isolator -- 6.3.3 Waveguide Circulator -- 6.4 Ferrites in Planar Circuits -- 6.4.1 Planar Circulators -- 6.4.2 EdgeGuidedMode Propagation -- 6.4.3 Edge GuidedMode Isolator -- 6.4.4 Phase Shifters -- 6.5 SelfBiased Ferrites -- 6.6 Supplementary Problems -- References -- Chapter 7 Measurements -- 7.1 Introduction -- 7.2 RF and Microwave Connectors -- 7.2.1 Maintenance of Connectors -- 7.2.2 Connecting to Planar Circuits.

7.3 Microwave Vector Network Analyzers -- 7.3.1 Description and Configuration -- 7.3.2 Error Models Representing a VNA -- 7.3.3 Calibration of a VNA -- 7.4 OnWafer Measurements -- 7.5 Summary -- References -- Chapter 8 RF Filters -- 8.1 Introduction -- 8.2 Review of Filter Responses -- 8.3 Filter Parameters -- 8.4 Design Strategy for RF and Microwave Filters -- 8.5 MultiElement LowPass Filter -- 8.6 Practical Filter Responses -- 8.7 Butterworth (or Maximally Flat) Response -- 8.7.1 Butterworth LowPass Filter -- 8.7.2 Butterworth HighPass Filter -- 8.7.3 Butterworth BandPass Filter -- 8.8 Chebyshev (Equal Ripple) Response -- 8.9 Microstrip LowPass Filter, Using Stepped Impedances -- 8.10 Microstrip LowPass Filter, Using Stubs -- 8.11 Microstrip EdgeCoupled BandPass Filters -- 8.12 Microstrip End Coupled BandPass Filters -- 8.13 Practical Points Associated with Filter Design -- 8.14 Summary -- 8.15 Supplementary Problems -- References -- Chapter 9 Microwave SmallSignal Amplifiers -- 9.1 Introduction -- 9.2 Conditions for Matching -- 9.3 Distributed (Microstrip) Matching Networks -- 9.4 DC Biasing Circuits -- 9.5 Microwave Transistor Packages -- 9.6 Typical Hybrid Amplifier -- 9.7 DC Finger Breaks -- 9.8 Constant Gain Circles -- 9.9 Stability Circles -- 9.10 Noise Circles -- 9.11 LowNoise Amplifier Design -- 9.12 Simultaneous Conjugate Match -- 9.13 Broadband Matching -- 9.14 Summary -- 9.15 Supplementary Problems -- References -- Chapter 10 Switches and Phase Shifters -- 10.1 Introduction -- 10.2 Switches -- 10.2.1 PIN Diodes -- 10.2.2 Field Effect Transistors -- 10.2.3 Microelectromechanical Systems -- 10.2.4 Inline Phase Change Switch Devices -- 10.3 Digital Phase Shifters -- 10.3.1 SwitchedPath Phase Shifter -- 10.3.2 LoadedLine Phase Shifter -- 10.3.3 ReflectionType Phase Shifter -- 10.3.4 Schiffman 90° Phase Shifter. 10.3.5 SingleSwitch Phase Shifter -- 10.4 Supplementary Problems -- References -- Chapter 11 Oscillators -- 11.1 Introduction -- 11.2 Criteria for Oscillation in a Feedback Circuit -- 11.3 RF (Transistor) Oscillators -- 11.3.1 Colpitts Oscillator -- 11.3.2 Hartley Oscillator -- 11.3.3 Clapp-Gouriet Oscillator -- 11.4 VoltageControlled Oscillator -- 11.5 CrystalControlled Oscillators -- 11.5.1 Crystals -- 11.5.2 CrystalControlled Oscillators -- 11.6 Frequency Synthesizers -- 11.6.1 The PhaseLocked Loop -- 11.6.1.1 Principle of a PhaseLocked Loop -- 11.6.1.2 Main Components of a PhaseLocked Loop -- 11.6.1.3 Gain of PhaseLocked Loop -- 11.6.1.4 Transient Analysis of a PhaseLocked Loop -- 11.6.2 Indirect Frequency Synthesizer Circuits -- 11.7 Microwave Oscillators -- 11.7.1 Dielectric Resonator Oscillator -- 11.7.2 DelayLine Stabilized Microwave Oscillators -- 11.7.3 Diode Oscillators -- 11.7.3.1 Gunn Diode Oscillator -- 11.7.3.2 IMPATT Diode Oscillator -- 11.8 Oscillator Noise -- 11.9 Measurement of Oscillator Noise -- 11.10 Supplementary Problems -- References -- Chapter 12 RF and Microwave Antennas -- 12.1 Introduction -- 12.2 Antenna Parameters -- 12.3 Spherical Polar Coordinates -- 12.4 Radiation from a Hertzian Dipole -- 12.4.1 Basic Principles -- 12.4.2 Gain of a Hertzian Dipole -- 12.5 Radiation from a HalfWave Dipole -- 12.5.1 Basic Principles -- 12.5.2 Gain of a HalfWave Dipole -- 12.5.3 Summary of the Properties of a HalfWave Dipole -- 12.6 Antenna

Arrays -- 12.7 Mutual Impedance -- 12.8 Arrays Containing Parasitic Elements -- 12.9 Yagi-Uda Antenna -- 12.10 LogPeriodic Array -- 12.11 Loop Antenna -- 12.12 Planar Antennas -- 12.12.1 Linearly Polarized A linearly polarized antenna is one where the direction of the radiated electric field remains fixed as the wave propagates. Patch Antennas.
12.12.2 Circularly Polarized Planar Antennas.
