

1. Record Nr.	UNINA9910555243703321
Titolo	Solar-to-chemical conversion : photocatalytic and photoelectrochemical processes // edited by Hongqi Sun
Pubbl/distr/stampa	Weinheim, Germany : , : Wiley-VCH GmbH, , [2021] ©2021
ISBN	3-527-82508-8 3-527-82509-6
Descrizione fisica	1 online resource (476 pages) : illustrations
Disciplina	621.3124
Soggetti	Solar energy Energy conversion Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Chapter 1 Introduction: A Delicate Collection of Advances in SolartoChemical Conversions -- Chapter 2 Artificial Photosynthesis and Solar Fuels -- 2.1 Introduction of Solar Fuels -- 2.2 Photosynthesis -- 2.2.1 Natural Photosynthesis -- 2.2.2 Artificial Photosynthesis -- 2.3 Principles of Photocatalysis -- 2.4 Products of Artificial Photosynthesis -- 2.4.1 Hydrocarbons -- 2.4.1.1 Methane (CH ₄) -- 2.4.1.2 Methanol (CH ₃ OH) -- 2.4.1.3 Formaldehyde (HCHO) -- 2.4.1.4 Formic Acid (HCOOH) -- 2.4.1.5 C ₂ Hydrocarbons -- 2.4.1.6 Other Hydrocarbons -- 2.4.2 Carbon Monoxide (CO) -- 2.4.3 Dioxygen (O ₂) -- 2.5 Perspective -- Acknowledgments -- References -- Chapter 3 Natural and Artificial Photosynthesis -- 3.1 Introduction -- 3.2 Overview of Natural Photosynthesis -- 3.3 Light Harvesting and Excitation Energy Transfer -- 3.4 Charge Separation and Electron Transfer -- 3.5 Water Oxidation -- 3.6 Carbon Fixation -- 3.7 Conclusions -- References -- Chapter 4 Photocatalytic Hydrogen Evolution -- 4.1 Introduction -- 4.2 Fundamentals of Photocatalytic H ₂ Evolution -- 4.3 Photocatalytic H ₂ Evolution Under UV Light -- 4.3.1 Titanium Dioxide (TiO ₂)Based Semiconductors -- 4.3.2 Other Types of UVResponsive Photocatalysts

-- 4.4 Photocatalytic H₂ Evolution Under Visible Light -- 4.4.1 Carbon Nitride (C₃N₄)Based Semiconductor -- 4.4.2 Other Types of Visible LightResponsive Photocatalysts -- 4.5 Photocatalytic H₂ Evolution Under NearInfrared Light -- 4.6 Roles of Sacrificial Reagents and Reaction Pathways -- 4.7 Summary and Outlook -- References -- Chapter 5 Photoelectrochemical Hydrogen Evolution -- 5.1 Background of Photoelectrocatalytic Water Splitting -- 5.2 Mechanism of Charge Separation and Transfer -- 5.3 Strategy for Improving Charge Transfer -- 5.3.1 Improving the Charge Transfer in Continuous Film. 5.3.2 Improving the Charge Transfer in Particulate Photoelectrodes -- 5.4 Strategy for Improving Electron-Hole Separation -- 5.4.1 Heterojunction Formation -- 5.4.2 Crystal Facet Control -- 5.4.3 Surface Passivation -- 5.5 Surface Cocatalyst Design -- 5.6 Unbiased PEC Water Splitting -- 5.7 Conclusion and Perspective -- References -- Chapter 6 Photocatalytic Oxygen Evolution -- 6.1 Introduction -- 6.1.1 Configuration of Photocatalytic Water Oxidation -- 6.1.2 Mechanism, Thermodynamics, and Kinetics Toward Efficient Oxygen Evolution -- 6.2 Homogeneous Photocatalytic Water Oxidation -- 6.2.1 Molecular Complexes and Polyoxometalates -- 6.2.2 Mechanism Details and the Stability -- 6.3 Heterogeneous Photocatalytic Water Oxidation -- 6.3.1 Unique Properties of Nanosized Semiconductor System -- 6.3.1.1 Quantum Confinement -- 6.3.1.2 Localized Surface Plasmon Resonance (LSPR) -- 6.3.1.3 Surface Area and Exposed FacetEnhanced Charge Transfer -- 6.3.2 ZeroDimensional Semiconductor Materials for Photocatalytic Water Oxidation -- 6.3.2.1 0D Metal Complexes and Nanoclusters -- 6.3.2.2 Metal Oxide Quantum Dots and Nanocrystals -- 6.3.3 OneDimensional Semiconductor Materials for Photocatalytic Water Oxidation -- 6.3.4 TwoDimensional Semiconductor Materials for Photocatalytic Water Oxidation -- 6.3.4.1 2D Metal Oxide Nanosheets for Photocatalytic Water Oxidation -- 6.3.4.2 Layered Double Hydroxide (LDH) Nanosheets for Photocatalytic Water Oxidation -- 6.3.4.3 MetalBased Oxyhalide Semiconductors for Photocatalytic Water Oxidation -- 6.3.5 LD SemiconductorBased Hybrids for Photocatalytic Oxygen Evolution -- 6.3.5.1 1DBased (0D/1D and 1D/1D) Semiconductor Hybrids for Enhanced Photocatalytic Water Oxidation -- 6.3.5.2 2DBased (2D/2D) Semiconductor Hybrids for Enhanced Photocatalytic Water Oxidation -- 6.3.5.3 MetalFreeBased Semiconductors for Water Oxidation. 6.4 Catalytic Active Site-Catalysis Correlation in LD Semiconductors -- 6.5 Conclusions and Perspectives -- References -- Chapter 7 Photoelectrochemical Oxygen Evolution -- 7.1 Introduction -- 7.2 Honda-Fujishima Effect -- 7.3 Factors Affecting the Photoanodic Current -- 7.4 Electrode Potentials at Different pH -- 7.5 Evaluation of PEC Performance -- 7.6 Flat Band Potential and Photocurrent Onset Potential -- 7.7 Selection of Materials -- 7.8 Enhancement of PEC Properties -- 7.8.1 Nanostructuring and Morphology Control -- 7.8.2 Donor Doping -- 7.8.3 Modification of Photoanode Surface -- 7.8.4 ElectronConductive Materials -- 7.9 PEC Device for Water Splitting -- 7.10 Conclusions and Outlook -- References -- Chapter 8 Photocatalytic and Photoelectrochemical Overall Water Splitting -- 8.1 Introduction -- 8.2 Photocatalytic Overall Water Splitting -- 8.2.1 Principles and Mechanism -- 8.2.2 Key Performance Indicators -- 8.2.3 Materials for OneStep Photoexcitation Toward Overall Water Splitting -- 8.2.3.1 Semiconductors -- 8.2.3.2 Incorporation of Cocatalysts -- 8.2.3.3 Plasmonic Nanostructures -- 8.2.4 Hybrid Systems for TwoStep Photoexcitation Toward Overall Water Splitting -- 8.2.4.1 ZSchemes -- 8.3 Photoelectrochemical Overall Water Splitting -- 8.3.1 Principles and Mechanism -- 8.3.2 Key Performance Indicators -- 8.3.3 Materials

Design -- 8.3.3.1 Photoanode Materials -- 8.3.3.2 Photocathode Materials -- 8.3.4 Unassisted Photoelectrochemical Overall Water Splitting -- 8.3.4.1 Photoanode-Photocathode Tandem Cells -- 8.3.4.2 Photovoltaic-Photoelectrode Devices -- 8.4 Concluding Remarks and Outlook -- Acknowledgments -- References -- Chapter 9 Photocatalytic CO₂ Reduction -- 9.1 Introduction -- 9.2 Principle of Photocatalytic Reduction of CO₂ -- 9.3 Energy and Mass Transfers in Photocatalytic Reduction of CO₂.
9.3.1 Energy Flow from the Concentrator to Reactor -- 9.3.2 Energy Flow on the Surface of the Photocatalyst -- 9.3.3 Mass Flow in CO₂ Photocatalytic Reduction -- 9.3.4 Product Selectivity in CO₂ Photocatalytic Reaction -- 9.4 Conclusions -- Acknowledgments -- References -- Chapter 10 Photoelectrochemical CO₂ Reduction -- 10.1 Introduction -- 10.1.1 Introduction of Photoelectrocatalytic Reduction of CO₂ -- 10.1.2 Principles of Photoelectrocatalytic Reduction of CO₂ -- 10.1.3 System Configurations of Photoelectrocatalytic Reduction of CO₂ -- 10.2 PEC CO₂ Reduction Principles -- 10.2.1 Thermodynamics and Kinetics of CO₂ Reduction -- 10.2.2 Reaction Conditions -- 10.2.2.1 Reaction Temperature and Pressure -- 10.2.2.2 pH Value -- 10.2.2.3 Solvent -- 10.2.2.4 External Electrical Bias -- 10.2.3 Performance Evaluation of PEC CO₂ Reduction -- 10.2.3.1 Product Evolution Rate and Catalytic Current Density -- 10.2.3.2 Turnover Number and Turnover Frequency -- 10.2.3.3 Overpotential -- 10.2.3.4 Faradaic Efficiency -- 10.3 Application of Solar to Chemical Energy Conversion in PEC CO₂ Reduction -- 10.3.1 PEC CO₂ Reduction on Semiconductors -- 10.3.1.1 Oxide Semiconductors -- 10.3.1.2 Non oxide Semiconductors -- 10.3.1.3 Chalcogenide Semiconductors -- 10.3.2 PEC CO₂ Reduction on Cocatalyst Systems -- 10.3.2.1 Metal Nanoparticles -- 10.3.2.2 Metal Complexes -- 10.3.3 PEC CO₂ Reduction on Hybrid Semiconductors -- 10.3.3.1 Conductive Polymers -- 10.3.3.2 Enzymatic Biocatalysts -- 10.3.3.3 Organic Molecules -- 10.4 Other Configurations for PEC CO₂ Reduction -- 10.5 Conclusion and Outlook -- Acknowledgments -- Conflict of Interest -- References -- Chapter 11 Photocatalytic and Photoelectrochemical Nitrogen Fixation -- 11.1 Introduction -- 11.2 Fundamental Principles and Present Challenges -- 11.2.1 Principles in N₂ Reduction for NH₃ Production.
11.2.2 Challenges for N₂ Reduction to NH₃ -- 11.3 Strategies for Catalyst Design and Fabrication -- 11.3.1 Defect Engineering -- 11.3.1.1 Vacancies -- 11.3.1.2 Heteroatom Doping -- 11.3.1.3 Amorphization -- 11.3.2 Structure Engineering -- 11.3.2.1 Morphology Regulation -- 11.3.2.2 Facet Control -- 11.3.3 Interface Engineering -- 11.3.4 Heterojunction Engineering -- 11.3.5 Cocatalyst Engineering -- 11.3.6 Biomimetic Engineering -- 11.4 Conclusions and Outlook -- References -- Chapter 12 Photocatalytic Production of Hydrogen Peroxide Using MOF Materials -- 12.1 Introduction -- 12.2 Photocatalytic H₂O₂ Production Through Selective Two-Electron Reduction of O₂ Utilizing NiO/MIL125NH₂ -- 12.3 Two-Phase System Utilizing Linker-Alkylated Hydrophobic MIL125NH₂ for Photocatalytic H₂O₂ Production -- 12.4 Ti-Cluster-Alkylated Hydrophobic MIL125NH₂ for Photocatalytic H₂O₂ Production in Two-Phase System -- 12.5 Conclusion and Outlooks -- Reference -- Chapter 13 Photocatalytic and Photoelectrochemical Reforming of Methane -- 13.1 Introduction -- 13.2 Photo-Mediated Processes -- 13.3 Differences Between Photo-Assisted Catalysis and Thermocatalysis -- 13.3.1 Catalyst Involved -- 13.3.2 Reactors -- 13.3.3 Mechanism -- 13.3.4 Equations for Quantum Efficiency -- 13.4 Reactions of Methane Conversion via Photo-Assisted Catalysis -- 13.4.1 Methane Dry Reforming -- 13.4.2 Methane Steam

Reforming -- 13.4.3 Methane Coupling -- 13.4.4 Methane Oxidation
-- 13.4.5 Methane Dehydroaromatization -- 13.5 Conclusions and
Perspectives -- Acknowledgment -- References -- Chapter 14
Photocatalytic and Photoelectrochemical Reforming of Biomass -- 14.1
Introduction -- 14.2 Fundamentals of Photocatalytic and
Photoelectrochemical Processes -- 14.2.1 Photocatalytic Process --
14.2.2 Photoelectrochemical Process -- 14.3 Photocatalytic Reforming
of Biomass.
14.3.1 Photocatalytic Reforming of Lignin.
