

1. Record Nr.	UNINA9910556880003321
Titolo	Active particles . Volume 3 : advances in theory, models, and applications / / Nicola Bellomo, Jose Antonio Carrillo, and Eitan Tadmor, editors
Pubbl/distr/stampa	Cham, Switzerland : , : Springer International Publishing, , [2022] ©2022
ISBN	3-030-93302-4
Descrizione fisica	1 online resource (230 pages)
Collana	Modeling and Simulation in Science, Engineering and Technology
Disciplina	519.3
Soggetti	Mathematical optimization Mathematical optimization - Computer programs Models matemàtics Optimització matemàtica Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Contents -- Variability and Heterogeneity in Natural Swarms: Experiments and Modeling -- 1 Introduction -- 2 Sources of Variability in Nature -- 2.1 Development as a Source of Variation -- 2.2 Transient Changes in the Behavior of Individuals -- 2.3 Environmentally Induced Variations -- 2.4 Social Structure -- 2.5 Inherent/Intrinsic Properties and Animal Personality -- 2.6 Variability in Microorganisms -- 3 Experiments with Heterogeneous Swarms -- 3.1 Fish -- 3.2 Mammals -- 3.3 Insects -- 3.4 Microorganisms -- 4 Modeling Heterogeneous Collective Motion -- 4.1 Continuous Models -- 4.2 Agent-Based Models -- 4.3 Specific Examples: Locust -- 4.4 Specific Examples: Microorganisms and Cells -- 5 Summary and Concluding Remarks -- References -- Active Crowds -- 1 Introduction -- 2 Models for Active Particles -- 2.1 Continuous Random Walks -- 2.1.1 Excluded-Volume Interactions -- 2.2 Discrete Random Walks -- 2.3 Hybrid Random Walks -- 3 Models for Externally Activated Particles -- 3.1 Continuous Models -- 3.2 Discrete Models -- 4 General Model Structure -- 4.1 Wasserstein Gradient Flows -- 4.2 Entropy Dissipation

-- 5 Boundary Effects -- 5.1 Mass Conserving Boundary Conditions --  
5.2 Flux Boundary Conditions -- 5.3 Other Boundary Conditions -- 6  
Active Crowds in the Life and Social Science -- 6.1 Pedestrian Dynamics  
-- 6.2 Transport in Biological Systems -- 7 Numerical Simulations --  
7.1 One Spatial Dimension -- 7.2 Two Spatial Dimensions --  
References -- Mathematical Modeling of Cell Collective Motion  
Triggered by Self-Generated Gradients -- 1 Introduction -- 2 The  
Keller-Segel Model and Variations -- 2.1 The Construction of Waves by  
Keller and Segel -- 2.2 Positivity and Stability Issues -- 2.3 Variations  
on the Keller-Segel Model -- 2.4 Beyond the Keller-Segel Model: Two  
Scenarios for SGG.  
3 Scenario 1: Strongest Advection at the Back -- 4 Scenario 2: Cell  
Leakage Compensated by Growth -- 5 Conclusion and Perspectives --  
References -- Clustering Dynamics on Graphs: From Spectral Clustering  
to Mean Shift Through Fokker-Planck Interpolation -- 1 Introduction --  
1.1 Mean Shift-Based Methods -- 1.1.1 Lifting the Dynamics to the  
Wasserstein Space -- 1.2 Spectral Methods -- 1.2.1 Normalized  
Versions of the Graph Laplacian -- 1.2.2 More General Spectral  
Embeddings -- 1.3 Outline -- 2 Mean Shift and Fokker-Planck  
Dynamics on Graphs -- 2.1 Dynamic Interpretation of Spectral  
Embeddings -- 2.2 The Mean Shift Algorithm on Graphs -- 2.2.1 Mean  
Shift on Graphs as Inspired by Wasserstein Gradient Flows -- 2.2.2  
Quickshift and KNF -- 3 Fokker-Planck Equations on Graphs -- 3.1  
Fokker-Planck Equations on Graphs via Interpolation -- 3.2 Fokker-  
Planck Equation on Graphs via Reweighting and Connections to Graph  
Mean Shift -- 4 Continuum Limits of Fokker-Planck Equations on  
Graphs and Implications -- 4.1 Continuum Limit of Mean Shift  
Dynamics on Graphs -- 4.2 Continuum Limits of Fokker-Planck  
Equations on Graphs -- 4.3 The Witten Laplacian and Some  
Implications for Data Clustering -- 5 Numerical Examples -- 5.1  
Numerical Method -- 5.2 Simulations -- 5.2.1 Graph Dynamics as  
Density Dynamics -- 5.2.2 Comparison of Graph Dynamics and PDE  
Dynamics -- 5.2.3 Clustering Dynamics -- 5.2.4 Effect of the Kernel  
Density Estimate on Clustering -- 5.2.5 Effect of Data Distribution on  
Clustering -- 5.2.6 Blue Sky Problem -- 5.2.7 Density vs. Geometry --  
References -- Random Batch Methods for Classical and Quantum  
Interacting Particle Systems and Statistical Samplings -- 1 Introduction  
-- 2 The Random Batch Methods -- 2.1 The RBM Algorithms -- 2.2  
Convergence Analysis -- 2.3 An Illustrating Example: Wealth Evolution  
-- 3 The Mean-Field Limit -- 4 Molecular Dynamics.  
4.1 RBM with Kernel Splitting -- 4.2 Random Batch Ewald: An  
Importance Sampling in the Fourier Space -- 5 Statistical Sampling --  
5.1 Random Batch Monte Carlo for Many-Body Systems -- 5.2 RBM-  
SVGD: A Stochastic Version of Stein Variational Gradient Descent -- 6  
Agent-Based Models for Collective Dynamics -- 6.1 The Cucker-Smale  
Model -- 6.2 Consensus Models -- 7 Quantum Dynamics -- 7.1 A  
Theoretical Result on the N-Body Schrödinger Equation -- 7.1.1  
Mathematical Setting and Main Result -- 7.2 Quantum Monte Carlo  
Methods -- 7.2.1 The Random Batch Method for VMC -- 7.2.2 The  
Random Batch Method for DMC -- References -- Trends in Consensus-  
Based Optimization -- 1 Introduction -- 1.1 Notation and Assumptions  
-- 1.1.1 The Weighted Average -- 2 Consensus-Based Global  
Optimization Methods -- 2.1 Original Statement of the Method -- 2.1.1  
Particle Scheme -- 2.1.2 Mean-Field Limit -- 2.1.3 Analytical Results  
for the Original Scheme Without Heaviside Function -- 2.1.4 Numerical  
Methods -- 2.2 Variant 1: Component-Wise Diffusion and Random  
Batches -- 2.2.1 Component-Wise Geometric Brownian Motion -- 2.2.2  
Random Batch Method -- 2.2.3 Implementation and Numerical Results

-- 2.3 Variant 2: Component-Wise Common Diffusion -- 2.3.1  
Analytical Results -- 2.3.2 Numerical Results -- 3 Relationship of CBO  
and Particle Swarm Optimization -- 3.1 Variant 4: Personal Best  
Information -- 3.1.1 Performance -- 4 CBO with State Constraints --  
4.1 Variant 5: Dynamics Constrained to Hyper-Surfaces -- 4.1.1  
Analytical Results -- 5 Overview of Applications -- 5.1 Global  
Optimization Problems: Comparison to Heuristic Methods -- 5.2  
Machine Learning -- 5.3 Global Optimization with Constrained State  
Space -- 5.4 PDE Versus SDE Simulations -- 6 Conclusion, Outlook and  
Open problems -- References.
