Sommario/riassunto	"Nature Cancer aims to provide a unique forum through which the cancer community will learn about the latest, most significant cancer-related advances across the life, physical, applied and social sciences. Areas of interest include fundamental, preclinical research that furthers our understanding of the mechanisms underlying tumour initiation, propagation and progression; work aiming to translate this knowledge to the clinic by focusing on new approaches for the development and delivery of diagnostic and therapeutic modalities; clinical studies

informing cancer diagnosis, treatment and prevention; and new ways of understanding the global societal impact of cancer"--
