

1. Record Nr.	UNISA996213128703316
Autore	Pache Corinne Ondine <1963->
Titolo	A moment's ornament : the poetics of nympholepsy in ancient Greece / / Corinne Ondine Pache
Pubbl/distr/stampa	New York ; ; Oxford, : Oxford University Press, 2011
ISBN	0-19-971318-9
Descrizione fisica	1 online resource (222 p.)
Disciplina	292.2/114
Soggetti	Nymphs (Greek deities) Nymphs (Greek deities) in literature
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	Contents; Introduction; 1. Nympholeptic Goddesses at the End of the Theogony; 2. Nympholepts in Ancient Greece; 3. Goddesses in Love and Nympholeptic Heroes; 4. Odysseus Nympholeptos; 5. Kephalos in the City; 6. Hellenistic Nympholeptoi; Conclusion; Bibliography; Index of Passages Cited; A; B; C; D; E; H; K; L; M; N; O; P; S; T; V; General Index; A; B; C; D; E; F; G; H; I; K; L; M; N; O; P; R; S; T; W; Z
Sommario/riassunto	This book offers the first comprehensive study of the phenomenon of nympholepsy--the experience of being ""seized"" by a nymph--in ancient Greek cult and poetry. Using literary and archaeological sources, this study provides a new interpretation of the bond between mortals and immortals, and between cult and poetry.

2. Record Nr.	UNINA9910557104803321
Autore	Shao Songdong
Titolo	Advances in Modelling and Prediction on the Impact of Human Activities and Extreme Events on Environments
Pubbl/distr/stampa	Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2020
Descrizione fisica	1 online resource (414 p.)
Soggetti	Research and information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Rapid urbanization and industrialization have progressively caused severe impacts on the mountainous, river, coastal environments, and have increased the risks for people living in these areas. Human activities have changed the ecosystems, and, hence, it is important to determine ways to predict these consequences to enable the preservation and restoration of these key areas. Furthermore, extreme events attributed to climate change are becoming more frequent, aggravating the entire scenario and introducing ulterior uncertainties for the accurate and efficient management of these areas to protect the environment, as well as the health and safety of people. Climate change is altering the rain and extreme heat, as well as inducing other weather mutations. All these lead to more frequent natural disasters such as flood events, erosions, and contamination and spreading of pollutants. Therefore, efforts need to be devoted to investigating the underlying causes, and to identifying feasible mitigation and adaptation strategies to reduce the negative impacts on both the environment and citizens. In support of this aim, the selected papers in this book covered a wide range of issues that are mainly relevant to the following: i) the numerical and experimental characterization of complex flow conditions under specific circumstances induced by the natural hazards; ii) the effect of climate change on the hydrological processes in the mountainous, river and coastal environments, iii) the protection</p>

of ecosystems and the restoration of areas damaged by the effects of the climate change and human activities.
