Autore	Linhard Tabea Alexa <1972->
Titolo	Jewish Spain : a Mediterranean memory // Tabea Alexa Linhard
Pubbl/distr/stampa	Stanford, California : , : Stanford University Press, , 2014 ©2014
ISBN	0-8047-9188-0
Descrizione fisica	1 online resource (xi, 230 pages)
Collana	Stanford Studies in Jewish History and Culture
Disciplina	946/.004924
Soggetti	Jews, Spanish - Historiography Sephardim - Historiography Jews - Spain - History - 20th century Collective memory - Spain - History - 20th century
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Jewish Spain -- Contents -- Acknowledgments -- Introduction. "Ask the Mediterranean" -- One. Mapping Nostalgia -- Two. Exile in Sepharad -- Three. Responsible for the Fate of the World -- Four. History's Patio -- Five. Touring the Reminders of Sepharad -- Conclusion. Asking the Mediterranean, Waiting for an Answer -- Notes -- Bibliography -- Index
Sommario/riassunto	This volume centres on the historic relationship between Spain and the Jews in key moments of the 20th century and shows that it is impossible to understand and articulate what Spain was, is, and will be without taking into account both 'Muslim Spain' and 'Jewish Spain'. Its main argument revolves around the uses of the remote past in texts that depict the memory of complicated circumstances of Jewish life in Spain and in Northern Morocco during the Spanish Civil War, the Francoist repression in the postwar years, and World War II.

Titolo	Sensors for Gait, Posture, and Health Monitoring Volume 3
Pubbl/distr/stampa	Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2020
Descrizione fisica	1 online resource (386 p.)
Soggetti	Humanities Social interaction
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	In recent years, many technologies for gait and posture assessments have emerged. Wearable sensors, active and passive in-house monitors, and many combinations thereof all promise to provide accurate measures of physical activity, gait, and posture parameters. Motivated by market projections for wearable technologies and driven by recent technological innovations in wearable sensors (MEMs, electronic textiles, wireless communications, etc.), wearable health/performance research is growing rapidly and has the potential to transform future healthcare from disease treatment to disease prevention. The objective of this Special Issue is to address and disseminate the latest gait, posture, and activity monitoring systems as well as various mathematical models/methods that characterize mobility functions. This Special Issue focuses on wearable monitoring systems and physical sensors, and its mathematical models can be utilized in varied environments under varied conditions to monitor health and performance
