1. Record Nr.   UNINA9910557116603321

   Autore   Nastasi Benedetto

   Titolo   Open Data and Energy Analytics

   Pubbl/distr/stampa Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing
                       Institute, 2020

   Descrizione fisica 1 online resource (218 p.)

   Soggetti   Research and information: general

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Sommario/riassunto Open data and policy implications coming from data-aware planning
                       entail collection and pre- and postprocessing as operations of primary
                       interest. Before these steps, making data available to people and their
                       decision-makers is a crucial point. Referring to the relationship
                       between data and energy, public administrations, governments, and
                       research bodies are promoting the construction of reliable and robust
                       datasets to pursue policies coherent with the Sustainable Development
                       Goals, as well as to allow citizens to make informed choices. Energy
                       engineers and planners must provide the simplest and most robust
                       tools to collect, process, and analyze data in order to offer solid data-
                       based evidence for future projections in building, district, and regional
                       systems planning. This Special Issue aims at providing the state-of-
                       the-art on open-energy data analytics; its availability in the different
                       contexts, i.e., country peculiarities; and its availability at different
                       scales, i.e., building, district, and regional for data-aware planning and
                       policy-making. For all the aforementioned reasons, we encourage
                       researchers to share their original works on the field of open data and
                       energy analytics. Topics of primary interest include but are not limited
                       to the following: 1. Open data and energy sustainability; 2. Open data
                       science and energy planning; 3. Open science and open governance for
                       sustainable development goals; 4. Key performance indicators of data-
                       aware energy modelling, planning, and policy; 5. Energy, water, and
                       sustainability database for building, district, and regional systems; 6.
