   Livello bibliografico Monografia

   Sommario/riassunto In this issue, psychometrics researchers were invited to make
                     reanalyses or extensions of a previously published dataset from a
                     recent paper by Myszkowski and Storme (2018). The dataset analyzed
                     consisted of responses to a multiple-choice logical reasoning
                     nonverbal test, comprising the last series of Raven's (1941) Standard
                     Progressive Matrices. Although the original paper already proposed
                     several modeling strategies, this issue presents new or improved
                     procedures to study the psychometrics properties of tests of this type.
