1. Record Nr. UNINA9910557338103321 Autore Tomppo Erkki Titolo Advances in Remote Sensing for Global Forest Monitoring Pubbl/distr/stampa Basel, Switzerland, : MDPI - Multidisciplinary Digital Publishing Institute, 2021 Descrizione fisica 1 electronic resource (352 p.) Soggetti Research & information: general Environmental economics Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia The topics of the book cover forest parameter estimation, methods to Sommario/riassunto assess land cover and change, forest disturbances and degradation. and forest soil drought estimations. Airborne laser scanner data, aerial images, as well as data from passive and active sensors of different spatial, spectral and temporal resolutions have been utilized. Parametric and non-parametric methods including machine and deep learning methods have been employed. Uncertainty estimation is a key topic in each study. In total, 15 articles are included, of which one is a review article dealing with methods employed in remote sensing aided greenhouse gas inventories, and one is the Editorial summary

presenting a short review of each article.
