   Sommario/riassunto Nowadays, forecast applications are receiving unprecedent attention
                      thanks to their capability to improve the decision-making processes by
                      providing useful indications. A large number of forecast approaches
                      related to different forecast horizons and to the specific problem that
                      have to be predicted have been proposed in recent scientific literature,
                      from physical models to data-driven statistic and machine learning
                      approaches. In this Special Issue, the most recent and high-quality
                      researches about forecast are collected. A total of nine papers have
                      been selected to represent a wide range of applications, from weather
                      and environmental predictions to economic and management forecasts.
                      Finally, some applications related to the forecasting of the different
                      phases of COVID in Spain and the photovoltaic power production have
                      been presented.
