Descrizione fisica	198 pages : digital file(s)
Collana	Der elektronische Rechtsverkehr ; ; Band 43
Soggetti	Privacy, Right of - European Union countries Consumer protection - Law and legislation - European Union countries Data protection - Law and legislation - European Union countries EU law consumer protection data processing EU Member State
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	"Das Buch führt nach zwei Jahren Erfahrung mit der Datenschutz-Grundverordnung eine Evaluation aus Verbrauchersicht durch und präsentiert 33 einfache konkrete Vorschläge, ihren Text zu verbessern, um ihre Ziele besser zu verwirklichen. Daneben erörtert es konzeptionelle Schwächen der Verordnung und entwickelt Vorschläge für Lösungen, die ihren Schutzauftrag erfüllen.Die Verordnung ist für viele typische Anwendungssituationen viel zu abstrakt und provoziert daher Rechtsunsicherheit und Investitionsstau. Sie wird keiner Herausforderung moderner Informationstechnik gerecht und bewirkt dadurch Schutzlücken. Die wiederkehrenden Evaluationen der Verordnung können dazu beitragen, Mängel zu beseitigen und eine Evolution des EU-Datenschutzrechts zu bewirken."--Verl.

Sommario/riassunto	There is no term that better describes the essential features of human society than complexity. On various levels, from the decision-making processes of individuals, through to the interactions between individuals leading to the spontaneous formation of groups and social hierarchies, up to the collective, herding processes that reshape whole societies, all these features share the property of irreducibility, i.e., they require a holistic, multi-level approach formed by researchers from different disciplines. This Special Issue aims to collect research studies that, by exploiting the latest advances in physics, economics, complex networks, and data science, make a step towards understanding these economic and social systems. The majority of submissions are devoted to financial market analysis and modeling, including the stock and cryptocurrency markets in the COVID-19 pandemic, systemic risk quantification and control, wealth condensation, the innovation-related performance of companies, and more. Looking more at societies, there are papers that deal with regional development, land speculation, and the-fake news-fighting strategies, the issues which are of central interest in contemporary society. On top of this, one of the contributions proposes a new, improved complexity measure.
