

1. Record Nr.	UNISA996393149503316
Titolo	Notes of the evidence given against the Lord Howard of Escrick [[electronic resource]] : to the grand inquest of the hundred of Edmonton and Gore in the county of Middlesex; taken by Sir Charles Lee their foreman, and agreed to by all the rest of the jury, who offered to subscribe their names as an acknowledgment of the truth of them London, : Printed for S. Carr, 1681
Pubbl/distr/stampa	
Descrizione fisica	1 sheet (2 p.)
Altri autori (Persone)	LeeCharles, Sir, <1620-1700.>
Soggetti	Trials (Seditious libel) - England
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Signed: Charles Lee, William Blucke, Jos. Beale, John Nichol. Item at C3:2[150] imperfect: Torn at upper right, affecting title and text. Reproduction of original in the British Library.
Sommario/riassunto	eebo-0018

2. Record Nr.	UNINA9910590044903321
Autore	Vass Balázs
Titolo	Regional Failure Events in Communication Networks : Models, Algorithms and Applications // by Balázs Vass
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2022
ISBN	9783031142567 9783031142550
Edizione	[1st ed. 2022.]
Descrizione fisica	1 online resource (130 pages)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5061
Disciplina	363.348 621.3820113
Soggetti	Computer networks Computer science Geometry Statistics System theory Computer Networks Computational Geometry Statistics in Engineering, Physics, Computer Science, Chemistry and Earth Sciences Complex Systems Sistemes de telecomunicació Gestió d'emergències Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Formal Problem Statement -- RelatedWork -- Algorithmic Background.
Sommario/riassunto	This book presents a comprehensive study covering the design and application of models and algorithms for assessing the joint device failures of telecommunication backbone networks caused by large-scale regional disasters. At first, failure models are developed to make

use of the best data available; in turn, a set of fast algorithms for determining the resulting failure lists are described; further, a theoretical analysis of the complexity of the algorithms and the properties of the failure lists is presented, and relevant practical case studies are investigated. Merging concepts and tools from complexity theory, combinatorial and computational geometry, and probability theory, a comprehensive set of models is developed for translating the disaster hazard in informative yet concise data structures. The information available on the network topology and the disaster hazard is then used to calculate the possible (probabilistic) network failures. The resulting sets of resources that are expected to break down simultaneously are modeled as a collection of Shared Risk Link Groups (SRLGs), or Probabilistic SRLGs. Overall, this book presents improved theoretical methods that can help predicting disaster-caused network malfunctions, identifying vulnerable regions, and assessing precisely the availability of internet services, among other applications.

Sommario/riassunto

This book derives from the Special Issue of the Manufacturing Engineering Society 2019 (SIMES-2019) that has been launched as a joint issue of the journals Materials and Applied Sciences. The 29 contributions published in this Special Issue of Materials present

cutting-edge advances in the field of manufacturing engineering focusing on additive manufacturing and 3D printing; advances and innovations in manufacturing processes; sustainable and green manufacturing; manufacturing of new materials; metrology and quality in manufacturing; industry 4.0; design, modeling, and simulation in manufacturing engineering; and manufacturing engineering and society. Among them, the topic "Additive Manufacturing and 3D Printing" has attracted a large number of contributions in this journal due to its widespread popularity and potential.
