1. Record Nr. UNINA9910154823703321

Autore	Oachs Emily Rose
Titolo	Dodge Challenger SRT Hellcat / / by Emily Rose Oachs
Pubbl/distr/stampa	Bellwether Media
ISBN	1-68103-306-2
Disciplina	629.222/2
Soggetti	Challenger automobile
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	"Engaging images accompany information about the Dodge Challenger SRT Hellcat. The combination of high-interest subject matter and light text is intended for students in grades 3 through 7"--

2. Record Nr. UNINA9910488704703321

Autore	Mittelstedt Christian
Titolo	Structural mechanics in lightweight engineering / / Christian Mittelstedt
Pubbl/distr/stampa	Cham, Switzerland : , : Springer, , [2021] ©2021
ISBN	3-030-75193-7
Descrizione fisica	1 online resource (675 pages)
Disciplina	624.177
Soggetti	Lightweight construction Structural analysis (Engineering)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- Preface -- Contents -- 1 Introduction -- 1.1 Definition and Tasks of Lightweight Construction and Engineering -- 1.1.1 Introduction -- 1.1.2 What Is Lightweight Engineering? -- 1.2 Structural

Analysis in Lightweight Engineering -- 1.3 Structural Optimization in Lightweight Engineering -- 1.4 Structural Elements in Lightweight Engineering -- 1.5 About the Functionality of an Aircraft Fuselage -- 1.5.1 Main Components of an Aircraft Fuselage -- 1.5.2 Loads and Classification into Structural Elements -- 1.6 Aim and Structure of This Book -- 1.7 Notes on Relevant Literature -- 1.8 A Few Notes on Nomenclature -- References -- Part I Fundamentals -- 2 Theory of Elasticity -- 2.1 Introduction -- 2.2 State of Stress -- 2.2.1 Stress Vector and Stress Tensor -- 2.2.2 Stress Transformation -- 2.2.3 Principal Stresses, Invariants, Mohr's Circles -- 2.2.4 Decomposition of the Stress Tensor -- 2.2.5 Equilibrium Conditions -- 2.3 Deformations and Strains -- 2.3.1 Introduction -- 2.3.2 Green-Lagrange Strain Tensor -- 2.3.3 Von-Karman Strains -- 2.3.4 Infinitesimal Strain Tensor -- 2.3.5 Compatibility Conditions -- 2.3.6 Volume Strain -- 2.3.7 Decomposition of the Infinitesimal Strain Tensor -- 2.4 Constitutive Equations -- 2.4.1 Introduction -- 2.4.2 Hooke's Generalized Law -- 2.4.3 Strain Energy -- 2.4.4 Complementary Strain Energy -- 2.5 Boundary Value Problems -- 2.6 Material Symmetries -- 2.6.1 Full Anisotropy -- 2.6.2 Monotropy -- 2.6.3 Orthogonal Anisotropy/Orthotropy -- 2.6.4 Transverse Isotropy -- 2.6.5 Isotropy -- 2.6.6 Engineering Constants -- 2.6.7 Value Ranges for the Material Parameters -- 2.6.8 Alternative Representation of Isotropic Materials -- 2.7 Transformation Rules -- 2.8 Hygrothermal Problems -- 2.9 Cylindrical Coordinates -- References -- 3 Plane Problems -- 3.1 Introduction -- 3.2 Surface Structures.
3.2.1 Plane Surface Structures: Disks and Plates -- 3.2.2 Curved Surface Structures: Shells -- 3.3 Plane State of Strain -- 3.4 Plane State of Stress -- 3.5 Stress Transformation -- 3.5.1 Introduction -- 3.5.2 Principal Stresses -- 3.5.3 Mohr's Circle -- 3.6 Strain Transformation -- 3.7 Formulation for Orthotropic Materials -- 3.7.1 Plane State of Stress -- 3.7.2 Plane State of Strain -- 3.8 Formulation for Polar Coordinates -- Bibliography -- 4 Strength Criteria for Isotropic Materials -- 4.1 Introduction -- 4.2 Principal Stress Hypothesis -- 4.3 Principal Strain Hypothesis -- 4.4 Beltrami Strain Energy Hypothesis -- 4.5 Von Mises Strain Energy Hypothesis -- 4.6 Tresca Yield Criterion -- 4.7 Coulomb-Mohr Hypothesis -- 4.8 Drucker-Prager Hypothesis -- 4.9 Cuntze's Failure Mode Concept -- Bibliography -- Part II Thin-Walled Beam Structures -- 5 Beams Under Normal Forces and Bending Moments -- 5.1 Introduction -- 5.2 Basic Equations for an Arbitrary Reference System -- 5.3 First Cross-Sectional Normalization: Center of Gravity S -- 5.4 Second Cross-Sectional Normalization: Principal Axes -- 5.5 Selected Basic Cases -- 5.6 Analysis of Arbitrarily Segmented Cross-Sections -- 5.7 Calculation of Beam Deflections -- 5.8 Rod Structures -- Bibliography -- 6 Beams Under Transverse Shear Forces -- 6.1 Introduction -- 6.2 Shear Stresses in Open Cross-Sections -- 6.2.1 Basic Equations -- 6.2.2 Simplified Analysis of an I-Cross-Section -- 6.2.3 Unit Shear Flow -- 6.3 Shear Stresses in Closed Cross-Sections -- 6.3.1 Single-Cell Cross-Sections -- 6.3.2 Multi-Cell Cross-Sections -- 6.3.3 Mixed Cross-Sections -- 6.3.4 Use of Symmetry Properties -- 6.4 Shear Center -- 6.4.1 Open Cross-Sections -- 6.4.2 Closed Cross-Sections -- Bibliography -- 7 St. Venant Torsion -- 7.1 Introduction -- 7.2 Assumptions and Constitutive Law.
7.3 Arbitrary Thin-Walled Hollow Cross-Sections -- 7.4 Open Thin-Walled Cross Sections -- 7.5 Comparison of Closed and Open Cross-Sections -- 7.6 Multi-cell Cross Sections -- 7.7 Assembled Cross-Sections -- 7.8 Effective Wall Thicknesses -- 7.8.1 Truss Girders -- 7.8.2 Stiffened Box Beams -- 7.9 Determination of Internal Forces -- Bibliography -- 8 Warping Torsion -- 8.1 Introduction -- 8.2 Warping

of Open Cross-Sections -- 8.3 Warping of Closed Cross-Sections -- 8.3.1 Single Cell Cross-Sections -- 8.3.2 Multi-cell Cross-Sections -- 8.4 Unit Warping with Respect to the Shear Center -- 8.5 The First-Order Bending-Torsion Problem -- 8.6 Cross-Sectional Normalizations -- 8.6.1 First Cross-Sectional Normalization: Center of Gravity S -- 8.6.2 Second Cross-Sectional Normalization: Principal Axes -- 8.7 Example -- 8.8 Selected Basic Cases -- 8.8.1 Double Symmetrical I-Cross-Section -- 8.8.2 Single Symmetrical I-Cross-Section -- 8.8.3 C-Cross-Section -- 8.8.4 Z-Cross-Section -- 8.9 Determination of Internal Moments -- 8.9.1 Differential Equation of Warping Torsion -- 8.9.2 Selected Basic Cases -- 8.9.3 Influence of Normal Forces -- 8.10 Stress Analysis -- 8.11 Comparison of Open and Closed Cross-Sections -- Bibliography -- Part III Energy Methods -- 9 Work and Energy -- 9.1 Introduction -- 9.2 Work and Energy -- 9.2.1 Fundamentals -- 9.2.2 Internal and External Work -- 9.2.3 Principle of Work and Energy -- 9.3 Strain Energy and Complementary Strain Energy -- 9.3.1 The Rod -- 9.3.2 The Euler-Bernoulli Beam -- 9.3.3 Torsion -- 9.3.4 Combined Loading -- 9.3.5 Generalization for the Continuum -- 9.4 Application of the Principle of Work and Energy to Elastic Deformations -- 9.5 General Principle of Work and Energy of Elastostatics -- Bibliography -- 10 Principle of Virtual Displacements -- 10.1 Introduction -- 10.2 Virtual Displacements and Virtual Works.
10.3 The Principle of Virtual Displacements -- 10.3.1 Determination of Forces and Moments in Statically Determinate Systems -- 10.3.2 Influence Lines for Forces and Moments in Statically Determinate Systems -- 10.4 Pole Plans and Kinematic Chains -- 10.5 The Variational Operator -- 10.6 Formulation for a Continuum -- 10.7 The Rod -- 10.8 The Euler-Bernoulli Beam -- 10.9 Beam Under Torsion -- 10.10 Beam Under Combined Loads -- Bibliography -- 11 Principle of Stationary Value of the Total Elastic Potential -- 11.1 Introduction -- 11.2 Fundamentals of Calculus of Variations -- 11.2.1 Functional with First Order Derivatives -- 11.2.2 Functional with Second Order Derivatives -- 11.2.3 Functional with n-th Order Derivatives -- 11.2.4 Functional with n Functions with First Order Derivatives -- 11.3 Principle of the Stationary Value of the Total Elastic Potential -- 11.3.1 The Rod -- 11.3.2 The Euler-Bernoulli Beam -- 11.3.3 Beam Under Torsion -- 11.3.4 Beam Under Combined Load -- 11.4 First Theorem of Castiglianio -- 11.5 Theorem of Clapeyron -- Bibliography -- 12 Principle of Virtual Forces -- 12.1 Introduction -- 12.2 Virtual Forces and Complementary Virtual Work -- 12.3 The Principle of Virtual Forces -- 12.4 The Unit Load Theorem -- 12.5 The Principle of the Stationary Value of the Elastic Complementary Potential -- 12.6 Second Theorem of Castigliano -- 12.7 Theorem of Menabrea -- 12.8 The Force Method -- 12.8.1 Calculation of Deformations of Statically Determinate Systems -- 12.8.2 Analysis of Simply Statically Indeterminate Systems -- 12.9 Reciprocity Theorems -- 12.9.1 Theorem of Betti -- 12.9.2 Theorem of Maxwell -- 12.10 Calculation of Multiple Statically Indeterminate Systems -- 12.11 Influence Lines for Deformations of Statically Determinate Systems -- 12.12 The Reduction Theorem of Statics -- 12.13 Analysis of Continuous Beams -- Bibliography.
13 Energy-Based Approximation Methods -- 13.1 Introduction -- 13.2 The Ritz Method -- 13.2.1 The Euler-Bernoulli Beam -- 13.2.2 The Rod -- 13.2.3 Torsion -- 13.3 The Galerkin Method -- Bibliography -- 14 The Finite Element Method -- 14.1 Introduction -- 14.2 Finite Elements for Plane Trusses -- 14.2.1 Element Formulation and Calculation Steps -- 14.2.2 Statically Indeterminate Trusses -- 14.2.3 Examples -- 14.3 Finite Elements for Plane Systems of Straight Rods -- 14.3.1 The Two-Noded Rod Element -- 14.3.2 The Three-Noded Rod Element -- 14.4

Finite Elements for Plane Systems of Straight Beams -- 14.4.1 The Two-Noded Beam Element -- 14.4.2 Quality of the Solution, Convergence Behavior -- 14.4.3 The Three-Noded Beam Element -- 14.4.4 Comparison Ritz / FEM -- 14.5 Finite Elements for Torsion -- Bibliography -- Part IV Advanced Beam Models -- 15 Shear Field Beams -- 15.1 Introduction -- 15.2 Rectangular Skin Fields -- 15.2.1 Determination of Stiffener Forces and Shear Flows -- 15.2.2 Determination of Deformations -- 15.3 Parallelogram Skin Fields -- 15.4 Trapezoidal Skin Fields -- 15.5 Statically Indeterminate Shear Field Beams -- 15.6 Applications of the Shear Field Beam Model -- 15.6.1 Flexurally Rigid Beam Connections -- 15.6.2 Large Area Stiffened Structures -- 15.6.3 Load Introductions -- 15.6.4 Adhesive Overlap Joints -- References -- 16 The Timoshenko Beam -- 16.1 Introduction -- 16.2 Kinematics and Constitutive Law -- 16.3 Displacements and Stresses -- 16.4 Elementary Examples -- 16.5 Shear Correction Factor K -- 16.6 Energetic Consideration -- 16.7 The Force Method -- 16.7.1 Determination of Displacements -- 16.7.2 Statically Indeterminate Systems -- 16.8 The Ritz Method -- 16.9 Finite Beam Element -- References -- 17 Hybrid Beams -- 17.1 Introduction -- 17.2 Beams Under Normal Forces and Bending Moments. 17.2.1 Basic Equations for an Arbitrary Reference System.

3. Record Nr. UNINA9910557433003321

Autore	Battipaglia Giovanna
Titolo	Multiscale Approach to Assess Forest Vulnerability
Pubbl/distr/stampa	Frontiers Media SA, 2020
Descrizione fisica	1 online resource (240 p.)
Soggetti	Botany & plant sciences Science: general issues
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles, all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area! Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact
